UNIVERSITY OF KERALA

Career-related First Degree programme

Under CBCS System

GEOLOGY AND DIGITAL SURVEYING
(DOUBLE MAIN)

Programme Structure & Syllabus
(For those who join the Programme from the academic year 2020 onwards)

Foundation Courses, Core Courses (Main - 1 & Main - 2)
Open Courses, Project/Dissertation

2020
Foreword

The Board of Studies in Geology (Pass) and Board of Studies in Geography (Pass & PG) of the University of Kerala decided to frame the curriculum and syllabus of the Double Main Course B.Sc. Geology and Digital Surveying as per the instructions from the authorities of the University of Kerala and to be implemented with effect from the academic year 2020-21 as part of the efforts to introduce new UG/PG Programmes by the University of Kerala in its affiliated colleges to provide education and latest information to the students on new job oriented courses. Accordingly, the Boards of Studies in Geology (Pass) and Geography (Pass & PG) held series of discussions and an online workshop of two days duration in Google Meet Platform involving the Board members, Subject experts and teachers of colleges offering B.Sc. in the subjects of Geology and Geography, under the University of Kerala was held on the 5th and 6th of October 2020. A total of 22 teachers including the members of Board of Studies of Geology and Geography from different Colleges offering the two courses participated in the workshop. After detailed deliberations and incorporating the suggestions of experts such as Dr. Manju V. S., Professor, Department of Civil Engineering, College of Engineering Trivandrum, Prof. B. Thulasidharan Nair, Professor, Department of Civil Engineering, College of Engineering Trivandrum and Prof. Sabu P., Associate Professor, Department of Civil Engineering, College of Engineering Trivandrum, the syllabus was finalized. The draft syllabus was discussed and approved by the Board of Studies in the online meeting (Google Meet Platform) held on 9th October 2020. The following members of the two Boards of Studies were involved in the framing of the syllabus in the respective streams:

Main – 1: Geology
1) Dr. Gangadhar K., Chairman, Board of Studies in Geology (Pass)
2) Dr. Shinu N., Member
3) Dr. Shaji E., Member
4) Dr. K. Maya, Member

Main – 2: Digital Surveying
1) Smt. Bindu Somanathan, Chairperson, Board of Studies in Geography (Pass & PG)
2) Dr. V. K. Jayalekshmi, Member
3) Smt. Divya P., Member
4) Sri. Prasad Rajendran, Member

The Chairman of Board of Studies in Geology (Pass) and the Chairperson of the Board of Studies in Geography (Pass & PG) and Members of the Boards of Studies would like to place on record their gratitude to the entire faculty who took part in the discussion and contributed to the design of the syllabus, which will be effective from the academic year 2020-21. The Board
members themselves took great efforts to finalize the syllabus and their efforts are highly commendable. Chairman and Chairperson of the two Boards place on record their deep sense of appreciation to the authorities of University of Kerala who were concerned with the syllabus preparation, the Subject Experts and the teachers who participated in the workshop for their timely help and directions. Comments and suggestions for improvement are welcome.

Foundation Courses, Core Courses (Main - 1 & Main - 2)  
Open Courses, Project/Dissertation

2020
Eligibility for admission to Career Related First Degree Programme in Geology and Digital Surveying (Double Main)

Candidates shall be admitted to the course provided he/she has passed Plus Two examinations of the State or Central Board with Science or Humanities with Geography Streams. The eligibility is a pass in Higher Secondary Examination of the State or an Examination accepted by the University as equivalent thereto with any two of the following subjects: Physics, Chemistry, Mathematics, Geology, Geography or Statistics.

Aim and Objectives

The Career related First Degree Programme in Geology and Digital Surveying is a two main programme with Geology as Core – 1 or Main – 1 and Digital Surveying as Vocational Core or Core – 2 or Main – 2 subjects and is designed to develop a scientific attitude and an interest towards the modern areas of Geological / Earth Science studies and Digital Surveying. It is aimed to get an aptitude in modern aspects of Digital Surveying and its application in the fields of Geology and Geography. It will help the students to become critical and curious in their outlook. The courses are designed to impart the essential basics in Geology, Digital Surveying and Geography. A student completing the course will be made eligible to apply to higher studies in PG in the respective areas of Geological Sciences and Geography and also he / she will be getting good training in the aspects of Digital Surveying so that he can try new job oriented avenues of Digital Surveying in private sector or government sector.

The programme consists of Language courses, Foundation courses, Core (Main – 1 & Main - 2) courses, Open courses and Project/Dissertation. There are two foundation courses, the first of which is focused on aspects of Contemporary issues based on Constitution / Human Rights. The second foundation course is to give a general introduction to Environmental Studies, Environmental Management and Impact.

The various courses in the programme are aimed to develop proficiency in the theory as well as practical experiments, common equipments, laboratory, along with the collection and interpretation and presentation of scientific data in proper manner. In addition to this, students will be equipped with knowledge in the modern areas of Geology and Digital Surveying their applications oil and mineral exploration, groundwater exploration, land use survey, etc. Apart from understanding Digital Surveying and its significance in modern world it will help the student to find the potentialities of using the knowledge for practicing in private and thereby earning revenue. Students, who pursue this programme and pass out successfully, will surely have an urge to continue higher studies in Geology and Digital Surveying and contribute significantly in the development both in academic field and research field.
The total minimum credits of the programme is **120** and the various courses and its corresponding credits are depicted in the following table, which is followed by the general structure and semester wise allocation of courses, its credits and contact hours.

**The subject code is GLD (Geology & Digital Surveying)**

- 1 - Language
- 1.1 - Additional Language
- 2 - Foundation Courses
- 3 - Core Course – 1 (Main – 1)
- 4 - Open Course
- 5 - Project/Dissertation – 1
- 6 - Vocational Core Course – 2 (Main – 2)
- 7 - Project/Dissertation – 2
- 8 - Social Service/Extension Activities

**Evaluation of Examination**

Distribution of marks in theory and practicals between external and internal assessment is 80:20. Pass minimum of 40% for external and over all components.

**Project/Dissertation** is compulsory for each main, i.e., Main – 1: Geology and Main – 2: Digital Surveying. It can be carried out individually or by a group not exceeding five students. The topic of the project should be innovative and relevant to the fields of Geology / Digital Surveying. The topics are either to be allotted by the supervising teacher or to be selected by the students in consultation with the supervising teacher. The project report duly attested by the Supervising teacher and certified by the HOD has to be submitted on the day of Viva voce examination. The project shall be evaluated by two external examiners. The report (not less than 40 pages) should be prepared as per the following formats.

1. Title page
2. Declaration by the student
3. Certificate (Supervising teacher and HOD)
4. Acknowledgement if any
5. Table of contents
6. Abbreviations if any
7. Introduction and Review of literature
8. Materials and Methods
9. Results and Discussion
10. Summary and Conclusions
11. References

Care should be taken to represent the data in tables/graphs/figures.

**Project / Dissertation: Main – 1: Geology.** In Semester V, GLD1661.1: Project / Dissertation, has been allotted 2 hours with no credits; the project work can be commenced in the V Semester. In Semester VI, the same Course GLD1661.1: Project / Study Tour / Field work, can be continued and has been allotted 2 hours with 2 credits. The Project will be evaluated in the Semester VI as per University rules with Internal = 20 marks; Project Report = 60 marks and Viva = 20 marks.
Project / Dissertation: Main – 2: Digital Surveying. In Semester VI only, Course GLD1661.2: Project / Dissertation, has been allotted 2 hours with 2 credits. The Project will be evaluated in the Semester VI itself as per University rules with Internal = 20 marks; Project Report = 60 marks and Viva = 20 marks.

Field visit: It is compulsory that every student has to undertake a field study tour of not less than one week for observing geological features under the guidance of teachers of the Department during V or VI semester. Moreover, they have to submit a tour report countersigned by the Head of the department during the practical examination of GLD1643. If a student fails to undergo the study tour he/she may not be permitted to attend the examination.

Industry or Institute visit: It is also compulsory that every student has to undertake an Industry or Institute visit as part of their Digital Survey curriculum. They have to submit the report of the same, duly certified by the Head of the Department during the practical examination of GLD1673.
Main – 1: GEOLOGY

Semester I

FOUNDATION COURSE (Main – 1)

COURSE OUTCOMES

CO 1: Understand the political structure, both constitutional and administrative.
CO 2: Understand the rights and privileges granted by the constitution.
CO 3: Understand the concept and significance of human rights and the state of human rights in India.
CO 4: Understand the legal framework relating to water rights, mineral policy and pollution in India, which includes constitutional provisions, legislation as well as judicial decisions.

SYLLABUS

Module – III Contemporary issues in India under constitutional law – Constitutional Morality as a Challenge, Data Protection Bill and Right to Privacy, Constitutional Supremacy or Parliamentary sovereignty. (10 Hours)

REFERENCES

3. B. M. Gandhi, Landmarks in Indian Legal And Constitutional History, Eastern Book Company.

<td>Internal 20</td>
<td>External 80</td>
</tr>
</tbody>
</table>

COURSE OUTCOMES

CO 1: Understand the significance of various branches of Geology, the concept of rock cycle; describe characteristics of earth and its origin in relation to the Solar System and the Geological Time Scale.

CO 2: Understand and explain endogenic processes, the theories and hypothesis of plate tectonics, Continental drift and Sea-floor spreading; ideas of plate boundaries, plate movements and associated geological features.

CO 3: Understand and explain Mountains and types, volcanoes, their classification, products and global distribution; and earthquakes, types, causes, effects; elastic rebound theory, seismic waves, scale of measures and seismic belts of world.

CO 4: Understand the various field methods in Geology, the principles and accessories.

SYLLABUS

Module–I Geosciences – introduction to various branches – Physical Geology, Geomorphology, Mineralogy, Structural Geology, Petrology, Global tectonics, Palaeontology, Stratigraphy, Engineering Geology, Marine Geology, Geochemistry, Applied Geophysics, Geochemistry, Hydrogeology, Meteorology,

Module – II Solar system, Planets, Theories of origin of Earth. Earth - Shape, size, age and rotation. Internal structure of earth; crust, mantle, core; density and chemical composition; major seismic discontinuities. (15 Hours)

Module – III Endogenic processes: Plate Tectonics. Continental drift hypothesis and Sea floor spreading- evidences. Lithospheric plates, types of plate boundaries, plate movements and associated geological features, mid-ocean ridges, rift valleys, trenches, transform faults, island arcs, volcanic arcs, Benioff zones, Mantle plumes, Aseismic ridges. (15 Hours)

Module – V Field methodologies in Geology, Principles – Maps – Instruments – Clinometer, Brunton compass, Map Symbols, Toposheets, GPS, Aerial Photographs, Satellite imageries. (12 Hours)

PRACTICALS

FIELD METHODOLOGY (36 Hours)

1. Clinometer and Brunton Compass – Map orientation, Elements of Map Reading, Fore-bearing and Back-bearing.
2. Topographic Sheets: Scale, Legends – Types and Categories
4. Determination of Epicentre of an Earthquake.

COURSE OUTCOMES

CO 1: Understand and explain exogenic processes, with emphasis on weathering, soils and mass wasting.

CO 2: Understand and describe the different geological agents, viz., streams, groundwater, oceans, glaciers, wind and lakes.

CO 3: Understand and illustrate the geological actions of the various geological agents and their associated landform features.

SYLLABUS

Module – IV Glaciers-Formation, movement and morphology. Types of glaciers. Erosion,
transportation and deposition by glaciers. Glacial landforms. Global warming and its effects on glaciers. (12 Hours)

PRACTICALS

PHYSICAL GEOLOGY AND GEOMORPHOLOGY (36 Hours)

COURSE OUTCOMES
CO 1: Understand and acquire skill in instrumentation and field methodologies related to geological studies.

CO 2: Acquire knowledge and skill in identification of features in toposheets, diagrammatic representation of geomorphological features, preparation of thematic maps and contour maps.

SYLLABUS
GLD1141: FIELD METHODOLOGY (36 Hours)
1. Clinometer and Brunton Compass – Map orientation, Elements of Map Reading, Fore-bearing and Back-bearing.
2. Topographic Sheets: Scale, Legends – Types and Categories
4. Determination of Epicentre of an Earthquake.

GLD1241: PHYSICAL GEOLOGY & GEOMORPHOLOGY (36 Hours)
2. Study of toposheets to identify different drainage pattern and its illustration.
3. Delineation of drainage basins and identification of stream order in toposheets and their illustration.
4. Identification and representation of different landforms in toposheets.
5. Diagrammatic representation of evolution of meandering stream, hydrologic cycle, drainage network and sand dunes.
7. Preparation of profile from contour maps and toposheets.
Semester III

CORE COURSE (Main – 1)
GLD1341: CRYSTALLOGRAPHY AND MINERALOGY

</tbody>
</table>

COURSE OUTCOMES

CO 1: Understand the significance and application of crystallography in mineralogy as well as the elements of crystallography and different crystal systems.

CO 2: Understand and explain minerals, structure, classification, their physical, chemical and optical properties and their identification.

SYLLABUS

Module – IV Physical, chemical and optical properties of the following: olivines, garnets, pyroxenes amphiboles, micas, feldspars, feldspathoids, quartz, aluminosilicates, epidote, clay minerals, zeolite group and beryl tourmaline and cordierite. (15 Hours)
Module – V  Systematic study of the important non-silicate minerals - calcite, dolomite, diamond, graphite, sulphur, gold, silver, copper, realgar, orpiment, stibnite, molybdenite, cinnabar, sphalerite, galena, chalcopyrite, pyrite, magnetite, hematite, marcasite, barite, gypsum, halite, fluorite, corundum, cuprite, chromite, rutile, cassiterite, ilmenite, monazite, psilomelane, pyrolusite, goethite, limonite, bauxite, aragonite, magnesite, malachite and azurite. (10 Hours)

PRACTICALS (36 Hours)

MINERALOGY

Megasoscopic study and identification of following minerals:
Quartz, smoky quartz, milky quartz, amethyst, chalcedony, agate, jasper, chert, opal, orthoclase, microcline, plagioclase, perthite, nepheline, leucite, enstatite, bronzite, hypersthene, diopside, augite, wollastonite, anthophyllite, tremolite, actinolite, hornblende, olivine, serpentine, muscovite, biotite, vermiculite, phlogopite, chlorite, epidote, garnet, natrolite, stilbite, apophyllite, talc, gypsum, apatite, steatite, andalusite, kyanite, sillimanite, staurolite, cordierite, apatite, beryl, topaz, calcite, dolomite, tourmaline, zircon, fluorite, magnetite, haematite, chromite, sphalerite, psilomelane, pyrolusite, graphite, corundum.

Microscopic study of following minerals:
Quartz, microcline, orthoclase, albite, oligoclase, labradorite, nepheline, leucite, enstatite, hypersthene, augite, diopside, hornblende, tremolite, actinolite, anthophyllite, biotite, muscovite, olivine, epidote, garnet, chlorite, cordierite, andalusite, sillimanite, kyanite, staurolite, calcite, apatite, zircon, tourmaline.

**COURSE OUTCOMES**

CO 1: Understand groundwater in relation to hydrological cycle and explain hydrometeorology and its significance; describe hydrological measurements of important parameters.

CO 2: Understand and describe the occurrence of groundwater, the properties of aquifers and their types; define and explain the Darcy’s law governing groundwater movement and flow directions.

CO 3: Understand and describe the groundwater investigation techniques and pumping tests for determination of aquifer parameters.

CO 4: Understand and describe the groundwater provinces of India and the groundwater conditions in Kerala.

**SYLLABUS**

**Module – I**  
(10 Hours)

**Module – II**  
Zones of aeration and saturation, water table and potentiometric surfaces, porosity, permeability, aquifer, aquiclude, aquifuge. Types of aquifers – confined and unconfined; Artesian aquifers; Perched aquifers, Leaky or Semi-confined aquifers; Darcy’s law, hydraulic head and groundwater flow directions. Water table contour maps.  
(13 Hours)

**Module – III**  
Groundwater investigation techniques – geophysical exploration methods with special emphasis on electrical resistivity method, well logging, tracer techniques.  
(10 Hours)

**Module – IV**  
Water quality standards proposed by WHO and BIS. Physical and chemical parameters of water; water pollution; remedial measures. Diseases and bio-contamination of groundwater and surface water: remedies. Basic diagrams for representing groundwater quality.  
(9 Hours)

**Module – V**  
Water conservation practices; well design; well development; dug wells, tube wells, bore wells. Watershed management – rain water harvesting; artificial
recharge; surangams; sea water intrusion. Hydrogeological provinces of India. Groundwater status in India. Major aquifers and groundwater exploitation in Kerala. (12 Hours)

PRACTICALS

FUNDAMENTAL HYDROGEOLOGY (36 Hours)
1. Schematics of Hydrological cycle, subsurface distribution of groundwater and Types of Aquifers.
2. Preparation of Water table contour maps.
4. Identification and demarcation of groundwater provinces of India in a map.

COURSE OUTCOMES

CO 1: Understand and explain significance of palaeontology, the conditions and methods of fossilization, classification and nomenclature of fossils and the basic principles of Taxonomy, Systematics and Binomial nomenclature.

CO 2: Understand and explain the morphology, classification, geological history and stratigraphic importance of Phylum Protozoa, Phylum Coelenterata: Class Anthozoa, Phylum Brachiopoda, Phylum Mollusca: Classes Pelecypoda, Gastropoda, Cephalopoda.
CO 3: Understand and describe the morphology, classification, geological history and stratigraphic importance of Phylum Arthropoda: Class Trilobita, Phylum Echinodermata: Class Echinoidea and Phylum Hemichordata: Class Graptolithina.

CO 4: Understand the basic ideas of Micropalaeontology and describe the characteristics of important plant fossils.

SYLLABUS

Module – II Phylum Protozoa: Morphology, Classification, geological history and stratigraphic importance. Phylum Coelenterata – Class Anthozoa – Morphology, Classification and stratigraphic range and important fossils. (10 Hours)

Phylum Echinodermata: Class Echinoidea: General morphology, Regular and irregular echinoids – classification – geological history and important fossils.
Phylum Hemichordata – Class Graptolithina: general morphology, geological history and important fossils. (12 Hours)

Module – VI Micropalaeontology and Palynology: an introduction. Brief account of the following plant fossils – Glossopteris, Gangamopteris, Ptilophyllum, Calamites, Lepidodendron and Sigillaria. (6 Hours)

REFERENCES

**PRACTICALS**  
**PALAEONTOLOGY (36 Hours)**

Megascopic: Identification, drawing and description of the following fossils:

1. **Anthozoa**: Calceola, Zapherentis, Lithostrotion, Favosites, Halysites, Montlivaltia, Isastrea, Thecosmilia.
2. **Brachiopoda**: Spirifer, Productus, Terebratula, Rhynchonella, Lingula,
3. **Echinodermata**: Cidaris, Hemicidaris, Micraster, Hemiaster,
4. **Lamellibranch**: Arca, Cardita, Pecten, Trigonia, Megalodon, Gryphea, Exogyra, Ostrea, Inoceramus, Alectryonia, Hippiurites.
5. **Gastropods**: Natica, Trochus, Turritella, Conus, Murex, Physa, Bellerophon, Cyprea
6. **Cephalopods**: Nautilus, Ceratites, Acanthoceras, Turrilites and Belemnites
7. **Trilobites**: Paradoxides, Calymene, Phacops, Olenus, Olenellus.
8. **Graptolites**: Phyllograptus, Tetragraptus, Diplograptus, Monograptus

**COURSE OUTCOMES**

CO 1: Understand and describe the basic principles of Stratigraphy and breaks in stratigraphic successions and their significance; understand and explain the elements of stratigraphic classification, Geological Time Scale, Stratigraphic correlation and define typical terms related to stratigraphic studies.

CO 2: Understand and describe the basic terminologies in Structural Geology, the Rule of V’s
and characteristics of primary and secondary structures.

CO 3: Understand and describe rock deformation, the different stages; concepts and applications of stereographic projection in Structural Geology, foliations and lineations; and geological mapping techniques and procedures.

CO 4: Understand and describe the folds, faults and joints with reference to their origin, terminologies, classification and geological significance.

**SYLLABUS**

**Module – I** Scope and basic principles – Uniformitarianism, Superposition, Lateral continuity, Original horizontality, faunal succession, faunal assemblage – Breaks in stratigraphic successions – Hiatus – unconformities – nonsequences – diastems and their significance. (8 Hours)

**Module – II** Elements of lithostratigraphic, chronostratigraphic and biostratigraphic classification. Type area, Transported and leaked fossils. Geologic time scale and time units, Stratigraphic correlation, criteria and methods. Index fossils, Overlap and offlap. (10 Hours)

**Module – IV** Fold: Terminology. Classification of folds – Geometric and genetic. Recognition of folds in field and map. Unconformities: Types and their recognition in the field and in the maps. (10 Hours)

**REFERENCES**

PRACTICALS
STRUCTURAL GEOLOGY (36 Hours)
- Diagrammatic illustration of structural features - Attitude of beds - true and apparent dip, strike and dip symbols, rule of V, Types of folds, faults, joints and unconformities.
- Maps with suitable sections and geologic descriptions
  - Simple horizontal beds
  - Illustrating Rule of Vs
  - Simple dipping beds
  - Simple dipping beds with intrusions
  - Problems involving borehole data, thickness, dip and apparent dip
  - Dipping beds with unconformity
  - Folded beds
  - Maps with different types of faults
  - Combination maps (Unconformity, folds, faults, intrusions)
- Problems involving true and apparent dip, true vertical thickness and width of outcrops.
- Three point problems. Stereographic projection of linear and planar features.

Semester IV
CORE COURSE (Main – I)

COURSE OUTCOMES
CO 1: Understand and acquire skill in megascopic and microscopic study and identification of important rock forming minerals.
CO 2: Acquire knowledge and skill in diagrammatic representation of hydrological cycle, subsurface distribution of groundwater and Types of Aquifers; preparation of water table contour maps, diagrammatic representations of water quality and identification and representation of groundwater provinces of India in map.
CO 3: Understand and develop skill in megascopic identification, drawing and description of important fossils; diagrammatic illustrations of structural features, carrying out exercises in solving structural maps, determination of attitude of beds and solving three point problems in Structural Geology.
SYLLABUS

GLD1341: MINERALOGY (36 Hours)
Megascopic study and identification of following minerals:
Quartz, smoky quartz, milky quartz, amethyst, chalcedony, agate, jasper, chert, opal, orthoclase, microcline, plagioclase, perthite, nepheline, leucite, enstatite, bronzite, hypersthene, diopside, augite, wollastonite, anthophyllite, tremolite, actinolite, hornblende, olivine, serpentine, muscovite, biotite, vermiculite, phlogopite, chlorite, epidote, garnet, natrolite, stilbite, apophyllite, talc, gypsum, apatite, steatite, andalusite, kyanite, sillimanite, staurolite, cordierite, apatite, beryl, topaz, calcite, dolomite, tourmaline, zircon, fluorite, magnetite, haematite, chromite, sphalerite, psilomelane, pyroslusite, graphite, corundum

Microscopic study of following minerals:
Quartz, microcline, orthoclase, albite, oligoclase, labradorite, nepheline, leucite, enstatite, hypersthene, augite, diopside, hornblende, tremolite, actinolite, anthophyllite, biotite, muscovite, olivine, epidote, garnet, chlorite, cordierite, andalusite, sillimanite, kyanite, staurolite, calcite, apatite, zircon, tourmaline.

GLD1342: FUNDAMENTAL HYDROGEOLOGY (36 Hours)
1. Schematics of Hydrological cycle, subsurface distribution of groundwater and Types of Aquifers.
2. Preparation of Water table contour maps.
4. Identification and demarcation of groundwater provinces of India in a map.

GLD1441: PALEONTOLOGY (36 Hours)
Megascopic Identification, drawing and description of the following fossils:
- **Anthozoa**: Calceola, Zapherentis, Lithostrotion, Favosites, Halysites, Montlivaltia, Isastrea, Thecosmilia.
- **Brachiopoda**: Spirifer, Productus, Terebratula, Rhynchonella, Lingula,
- **Echinodermata**: Cidaris, Hemicidaris, Micraster, Hemiaster,
- **Lamellibranch**: Arca, Cardita, Pecten, Trigonia, Megalodon, Gryphea, Exogyra, Ostrea, Inoceramus, Alectryonia, Hippurites.
- **Gastropods**: Natica, Trochus, Turritella, Conus, Murex, Physa, Bellerophon, Cyprea
- **Cephalopods**: Nautilus, Ceratites, Acanthoceras, Turrilites and Belemnites
- **Trilobites**: Paradoxides, Calymene, Phacops, Olenus, Olenellus.
- **Graptolites**: Phyllograptus, Tetragraptus, Diplograptus, Monograptus
- **Plant Fossils**: Glossopteris, Gangamopteris, Ptliophyllum, Lepidodendron, Sigillaria, Calamites.

GLD1442: STRATIGRAPHY AND STRUCTURAL GEOLOGY (36 Hours)
- Diagrammatic illustration of structural features - Attitude of beds - true and apparent dip, strike and dip symbols, rule of V, Types of folds, faults, joints and unconformities.
- Maps with suitable sections and geologic descriptions
  - Simple horizontal beds
  - Illustrating Rule of V’s
  - Simple dipping beds
  - Simple dipping beds with intrusions
  - Problems involving borehole data, thickness, dip and apparent dip
  - Dipping beds with unconformity
  - Folded beds
  - Maps with different types of faults
  - Combination maps (Unconformity, folds, faults, intrusions)
- Problems involving true and apparent dip, true vertical thickness and width of outcrops.
- Three point problems. Stereographic projection of linear and planar features.

**Semester V**

**COURSE OUTCOMES**

CO 1: Understand the basic concept of rock cycle, origin of igneous rocks from magma, the Bowen’s reaction series; explain the important binary systems, the petrotectonic settings and diversity of igneous rocks in relation to various processes.

CO 2: Understand, classify and explain the forms of intrusive and extrusive igneous rocks and the different igneous structures and textures.

CO 3: Understand, classify and describe the different modes of classification of igneous rocks and explain CIPW norm and normative minerals.

CO 4: Understand and explain systematically the texture, mineralogy, classification, occurrence and origin of granites and basalts; and describe the brief petrographic character of common igneous rocks.

**SYLLABUS**

**Module – I** Rock – definition, types, rock cycle, plutonic, hypabyssal and volcanic igneous rocks. Origin of magma; primary and parental magmas. Cooling history of igneous rocks, melting and crystallization. Bowen’s reaction series. Study of following binary systems: Diopside-Anorthite (Eutectic), Albite-anorthite (solid solution), Forsterite-silica (Incongruent). (12 Hours)
Module – II  Petrotectonic settings, partial melting and magma generation (mid oceanic ridges and subduction zones only), Diversity of igneous rocks – magmatic differentiation process, fractional crystallization, liquid immiscibility and assimilation / contamination. (8 Hours)

Module – IV  Classification: basis of classification – texture, mineralogy and chemistry. Classification based on mineralogy – felsic and mafic minerals, mode, colour index and IUGS classification - QAP classification of plutonic and volcanic rocks and ultramafic rock classification. Chemical classification – Based on silica saturation and based on alkali & silica (brief introduction of alkalic, subalkalic, calc-alkalic and tholeiitic groups only) – Total alkali vs silica classification for volcanic rocks. A short account of CIPW norm and normative minerals. (9 Hours)

Module – V  Texture, mineralogy, classification, occurrence and origin of granites and basalts. Brief petrographic character of common igneous rocks – syenite, diorite, gabbro, andesite, rhyolite, pegmatites, lamprophyres, carbonatite, dunite, peridotite, anorthosite and kimberlite. (7 Hours)

COURSE OUTCOMES

CO 1: Understand and describe the physiographic and geological divisions of India and acquire knowledge about cratons and mobile belts.

CO 2: Understand and describe the Early Precambrian and Late Precambrian formations of India with emphasis on lithology, classification, age, structure, syn- and post-tectonic intrusives, organic remains, radiometric age and economic resources.

CO 3: Understand and describe the important Palaeozoic, Mesozoic and Cenozoic formations of India with reference to their distribution, lithology, classification, fossils and age.

CO 4: Understand and describe the stratigraphy of Kerala and explain the characteristics of the Precambrian terrain of Kerala.

SYLLABUS

Module I Brief study of the physiography divisions of India – Major geological divisions of India. Concept of Cratons and mobile belts. (6 Hours)
Module II  General study of the distribution and nomenclature of Early Precambrians of India. Major cratons and fold belts of the Indian shield. Detailed study of the lithology, classification, age, structure, syn- and post- tectonic intrusives, organic remains, radiometric age and economic resources of Dharwar Craton – Sargur Schist Complex, Peninsular Gneiss, Dharwar Supergroup, Aravalli Supergroup of Rajasthan.  
(12 Hours)

Module III  General study of the Late Precambrian terrains of India and study of the lithology, classification, structure, associated intrusives, organic remains, radiometric age and economic resources of the following – Delhi Supergroup, Cuddapah Supergroup, Vindhyan Supergroup and Kurnool Group.  
(12 Hours)

Module IV  A brief study of the distribution of marine Paleozoic and Mesozoic successions of India and detailed study of the following – Paleozoic and Triassic successions of Spiti, Jurassic of Spiti and Kutch. Cretaceous of Trichinopoly and Narmada valley, Gondwana Supergroup – Distribution, lithology, classification, age, structural features, fossils and coal resources.  
(10 Hours)

Module V:  Deccan Traps and associated sedimentaries, their distribution, lithology, classification, fossils and age. A brief study of the distribution of Cenozoic of Assam, Cuddalore Sandstone formations, Siwalik Supergroup.  
Stratigraphy of Kerala, Precambrian terrain of Kerala, Tertiaries of Kerala, Karewas of Kashmir, Indo-Gangetic Alluvium.  
(14 Hours)

COURSE OUTCOMES

CO 1: Understand and explain the subject meaning of Geology and its branches; describe the characters of earth; explain hydrologic cycle and role of groundwater.

CO 2: Understand and describe the various exogenic and endogenic processes that form a part of earth system, including earthquakes and volcanoes; and explain the role played by the geological agents in shaping earth.

CO 3: Understand and describe the natural resources and their classification; resources management and associated problems.

CO 4: Understand and describe Global climate change, causes and effects; explain the significance of pollution and waste disposal.

SYLLABUS

Module – I Introduction to Geology – branches of Geology, the earth – size, shape, density, volume and internal structure. Hydrologic cycle, groundwater - Infiltration, zones of groundwater, ground and perched water tables, open wells and bore wells. (8 Hours)

Module – III Endogenic processes: Volcanoes – types and distribution of major volcanoes, products of volcanism – gas, dust, lava and pyroclastics. Earthquakes – Seismic waves and propagation, epicenter and focus, intensity and magnitude scales, Seismographs and seismogram, Tsunami. (16 Hours)

Module – V Natural resources – Renewable and non renewable resources – Natural resources management and associated problems. Soil, Water and Mineral/Rock resources, Fossil fuels – Coal and Petroleum. (10 Hours)

Module – VI Global Climate change: Greenhouse effect, Global warming, Ozone depletion – causes and effects. Pollution and waste disposal – air, water and land pollution; brief ideas of causes and effects. (10 Hours)

COURSE OUTCOMES
CO 1: Understand and explain the basic concepts, terminologies and classification of Hazard and Disaster; Disaster Management and Disaster Management Plan.
CO 2: Understand and describe the various natural disasters with suitable examples; Understand and explain the Environmental disasters by citing suitable examples; Describe facts related to climate change, causes and effects.
CO 3: Understand and describe the Disaster Risk management strategies; the institutional frameworks; explain the application of IT in Disaster Risk management; understand, categorize and describe disaster relief and its components; and explain Disaster Management Act and Policy.
CO 4: Understand and describe Hazard and vulnerability situation in India and Kerala; types
of disasters in Kerala; explain accident related disasters, their prevention and mitigation; the application of GIS in Disaster management; and describe the significance of Emergency procedures and warning systems.

SYLLABUS

Module – III  Environmental Disasters – Dam collapse and Mitigation measures. Nuclear disasters, Chemical Disasters, Biological Disasters, Forest fire and Oil fire. Climate change: global warming, sea level rise, ozone depletion, carbon sink and sources – causes and effects.  (14 Hours)

Module – IV  Disaster Risk Management; Institutional arrangement: Prevention, Preparedness, and Mitigation; Disaster Preparedness Plan. Application of Information Technology in Disaster Preparedness. Hazards and Vulnerability scenario in India; Disaster relief and its components – water, food, sanitation, shelter, health and waste management; Disaster Management Act and Policy.  (10 Hours)

**COURSE OUTCOMES**

CO 1: Understand the basic ideas of Gemmology; describe the characteristics of gemstones; explain Navaratnas and their significance; understand and describe valuing and grading of gemstones and explain techniques of cutting and polishing of gemstones.

CO 2: Understand and describe the various techniques of gemstone treatments; explain the differences of natural, artificial and synthetic gemstones; describe the physical properties and classification of gemstones.

CO 3: Understand and describe the properties of important gemstones like Diamond, ruby, sapphire, emerald, jade, garnet, amethyst, topaz, quartz, tourmaline etc.

CO 4: Understand and describe the industrial application of gemstones; understand and categorize the Indian and World industrial gemstone centres; explain the distribution of gemstones in India and in Kerala.

**SYLLABUS**

Module – II Treatments Applied to gemstones – Heating, radiation, waxing, oiling. Fracture filling. Natural, Synthetic and Artificial gemstones. (12 Hours)

Module – III Physical properties of gemstones, Classification of gemstones – Precious and semiprecious. (10 Hours)

Module – V Industrial applications of gemstones. Gem industrial centres in India and world. Gemstone distribution in India. Gemstones of Kerala. (8 Hours)

COURSE OUTCOMES

CO 1: Understand and explain the basic concept of origin of sedimentary rocks, their classification, textures and structures.

CO 2: Understand, classify and explain the categorization of sedimentary rocks, describe the characteristics and classification of important sedimentary rocks like sandstone, limestone and acquire ideas of chemical and biochemical sedimentary rocks.

CO 3: Understand the concept of metamorphism and metamorphic rocks; explain the origin of metamorphic rocks, the factors, limits and types of metamorphism; and categorize and describe the metamorphic grade concept, metamorphic mineral zone concept and metamorphic facies concept.

CO 4: Understand and explain metamorphic textures and structures; describe the metamorphism of pelitic, carbonate and mafic rocks; illustrate and describe the petrography of some important metamorphic rocks.

SYLLABUS

scale scheme. Grain shape, morphology and fabric. Non-clastic texture – different types of crystalline texture. Brief study of the following: Primary, secondary and organic structures. (14 Hours)

**Module – II**

Categorization of mechanical rocks: Argillaceous, arenaceous and rudaceous rocks. Introduction to the following: sandstone, shale, conglomerate and breccias. Introduction to limestone, Classification of limestone – Folk and Dunham scheme. Brief study of the following chemical and biochemical sedimentary rocks: Calcareous, ferruginous, siliceous, phosphatic and evaporates. (16 Hours)

**Module – III**

Definition of metamorphism. Factors of metamorphism – pressure, temperature, chemically active fluids, time and parent rock chemistry, Limits of metamorphism. Anatexis, palingenesis and migmatites. Metasomatism. Types of metamorphism – Contact metamorphism, Regional metamorphism – orogenic and ocean floor, Burial metamorphism, Cataclastic metamorphism, hydrothermal metamorphism Impact/shock metamorphism and plutonic metamorphism. (14 Hours)

**Module – IV**

Metamorphic grade concept. Progressive and retrogressive metamorphism. Stability of minerals in P-T field. Metamorphic mineral zone concept – index minerals and Isograd, Metamorphic facies concept. (14 Hours)

**Module – V**

Metamorphic textures – Crystalloblastic and Relict textures. Metamorphic structures – foliations, lineations, cataclastic and miscellaneous. Metamorphism of pelitic, carbonate and mafic rocks. Petrography of the following metamorphic rocks: Slate, Phyllite, Quartzite, Marble, Schists, Amphibolite, Gneisses, Eclogite, Blueschist, mylonite, Hornfels and Granulites – Charnockite (massive, incipient), Khondalite and Leptynite. (14 Hours)

**REFERENCES**

PRACTICAL
IGNEOUS PETROLOGY &
SEDIMENTARY AND METAMORPHIC PETROLOGY (72 Hours)

Megascopic identification of the following rocks:
- Granite (Different Types), Graphic granite, Granite Porphyry, Pegmatite, Aplite, Syenite, Syenite-porphry, Diorite, Gabbro, Anorthosite, Dunite, Dolerite, Basalt, Rhyolite, Nepheline Syenite, Pyroxenite, Peridotite.
- Slate, Phyllite, Schist (different types), Gneiss (different types), Quartzite, Marble, Amphibolite, Eclogite, Leptynite, Charnockite, Khondalite, Mafic Granulite, Schorl rock, Banded Magnetite Quartzite.
- Conglomerate, breccia, sandstone (coarse, medium, fine), limestone (micritic, dolomitic, marl, oolitic, fossiliferous), Shale, Laterite.

Microscopic identification and description of the following rocks:
- Schist, Gneiss, Quartzites, Charnockite, Amphibolite and Marble.
- Sandstone (different types), Limestone (different types), Shale, Conglomerate, Breccia.

Semester VI

</tbody>
</table>

COURSE OUTCOMES

CO 1: Understand history of development of Economic Geology, the terminologies associated with the subject and the classification schemes of economic mineral deposits.

CO 2: Understand and explain the various processes of formation of ore mineral deposits, both internal processes and external processes.

CO 3: Understand and describe metallogenic epochs and provinces with reference to India and mode of occurrence, distribution in India and important economic uses of important ore minerals; understand and describe materials for Abrasives, Refractories, Ceramics and Cement; Gemstones; Strategic and Critical minerals.
CO 4: Understand and describe the Mineral Policy of India; the detailed account of the fuel minerals coal and petroleum, with reference to their origin, mode of occurrence and distribution in India.

SYLLABUS

Module – I Definition – scope and historical development of Economic Geology, ore minerals and gangue minerals, tenor and grade of ores. Primary and secondary classification of mineral deposits – Bateman’s classification. (10 Hours)

Module – II Processes of formation of mineral deposits: Origin due to internal processes – Magmatic deposits, Hydrothermal deposits, Contact metasomatic deposits, Metamorphic deposits.
Processes of formation of mineral deposits: Origin due to External / Surface processes – Evaporite deposits, Sedimentary deposits - mechanical concentration, residual concentration, Oxidation and Supergene enrichment, Volcanic exhalative deposits. (24 Hours)

Module – III Metallogenic Epochs and Provinces with particular reference to India. A brief study on mode of occurrence, distribution in India and important economic uses of ore minerals of the following - Aluminium, Chromium, Gold, Iron, Copper, Lead, Manganese, Silver, Thorium, Titanium, Uranium and Zinc. Mineral resources of Kerala. (15 Hours)

REFERENCES
PRACTICAL ECONOMIC GEOLOGY (36 Hours)
Megascopic identification and description, Indian occurrence and uses of the following ore and industrial minerals:-
2. Sulphates: Barite, Celestite, Gypsum.
5. Industrial minerals: Halite, Fluorite, Monazite, Graphite, Asbestos.

Semester VI
CORE COURSE (Main – 1)
GLD1643: PRACTICAL – III
(Practicals of GLD1541, GLD1641, GLD1642)

COURSE OUTCOMES
CO 1: Acquire skill in megascopic and microscopic identification of Igneous, Sedimentary and Igneous rocks.
CO 2: Acquire knowledge and skill in megascopic identification and description, Indian occurrence and uses of the important ore and industrial minerals.

SYLLABUS
IGNEOUS, SEDIMENTARY & METAMORPHIC PETROLOGY (72 Hours)
Megascopic identification of the following rocks:
Granite (Different Types), Graphic granite, Granite Porphyry, Pegmatite, Aplite, Syenite, Syenite-porphyry, Diorite, Gabbro, Anorthosite, Dunite, Dolerite, Basalt, Rhyolite, Nepheline Syenite, Pyroxenite, Peridotite.
Slate, Phyllite, Schist (different types), Gneiss (different types), Quartzite, Marble, Amphibolite, Eclogite, Leptynite, Charnockite, Khondalite, Mafic Granulite, Schorl rock, Banded Magnetite Quartzite.
Conglomerate, breccia, sandstone (coarse, medium, fine), limestone (micritic, dolomitic, marl, oolitic, fossiliferous), Shale, Laterite.
Microscopic identification and description of the following rocks:
Schist, Gneiss, Quartzites, Charnockite, Amphibolite and Marble.
Sandstone (different types), Limestone (different types), Shale, Conglomerate, Breccia.

ECONOMIC GEOLOGY (36 Hours)

Megascopic identification and description, Indian occurrence and uses of the following ore and industrial minerals:-
2. Sulphates: Barite, Celestite, Gypsum.
5. Industrial minerals: Halite, Fluorite, Monazite, Graphite, Asbestos.

Semester V & Semester VI

CORE COURSE (Main – 1)
GLD1661.1: PROJECT OR DISSERTATION / STUDY TOUR / FIELDWORK
(2 Credits)

Study Tour / Fieldwork: It is compulsory that every student has to undertake a field study tour of not less than one week for observing geological features under the guidance of teachers of the Department during V or VI semester. Moreover, they have to submit a tour report countersigned by the Head of the department during the practical examination of GLD1643. If a student fails to undergo the study tour he/she may not be permitted to attend the examination.

Project / Dissertation Work: The Project work will be carried out by the student as an individual Geology Project. The student has to commence the project work in the Fifth Semester and continue in the Sixth Semester. The Project Report has to be submitted during the Sixth semester examinations which will form a component for the 2 Credits of the Course GLD1661.1. The Project / Dissertation work with credit of 2 in the VI semester examinations will have both internal and external assessment components of 20 marks and 80 marks respectively.
Main – 2: DIGITAL SURVEYING

Semester I

CORE COURSE
GLD1171: INTRODUCTION TO GENERAL GEOGRAPHY

<td>3</td>
</tr>
</tbody>
</table>

COURSE OUTCOMES

CO 1: Understand the basic concept of Geography, relation of the subject with other subjects, facts and figures related to earth, its structure and composition and various morphological features.

CO 2: Acquire knowledge and understand the process of gradation, the agents and the various types of landforms created by these agents.

CO 3: Understand and describe the various aspects of Climatology and Oceanography related to our world.

SYLLABUS

Module – III Gradation – Agents of gradation – Erosional and depositional landforms due to the work of running water, glaciers, wind, and underground water and sea waves. (14 Hours)

</table>

COURSE OUTCOMES
CO 1: Understand various aspects of Environmental Studies, Components and relations of environment and ecosystem, man in relation to environment; acquire knowledge and describe different aspects and regimes of environmental quality.
CO 2: Understand the ideas of environmental monitoring and management and significance of National Environment Policy.
CO 3: Acquire knowledge and understand the significance of EIA, the methodologies, analysis and models; understand the framing and reviewing of EIA reports; impact studies on various strata of human society and relevance of EMP.

SYLLABUS
Module – I Nature and Scope of Environmental Studies – Components of Physical Environment: Interdependence and Inter-relations – Concept of Ecosystems: Components and Structure of Ecosystem – Man and Environment Relationship – Environmental Ethics. (5 Hours)
Module – II Environmental Quality – Environmental Degradation and Manifestations: Land, Water (Surface & Ground) and Air-Pollution control vs Pollution Prevention – Stages and approaches of Pollution Prevention – Source reduction, Raw material substitution, Toxic use reduction and elimination, Process modification. (6 Hours)

</table>

COURSE OUTCOMES

CO 1: Understand and acquire practical knowledge of factors related to shape of earth, scale and time.

CO 2: Understand and development of skills in map projections, datum and coordinate reference systems; and to know the details of World Geodetic System 84.

CO 3: Understand and develop basic skills of topographic surveying and mapping and calculation of distance and area from Topographic maps, and understand the concept of slope and gradient.

SYLLABUS

Module – I
Shape and dimension of the Earth – Spheroid – Ellipsoid – Geoid – Latitude and Longitude – Local and Standard Time – Scales: Plain Scale – Comparative Scale – Diagonal Scale. (20 Hours)

Module – II

Module – III
Topographic Surveying and Mapping: Calculation of Distance, Area from Topographical Maps – Representation of major relief features by Contour – Concept of Slope and Gradient. (35 Hours)

</tbody>
</table>

COURSE OUTCOMES

CO 1: Understand and apply the principles, objectives, uses, measurements, errors and stages of surveying, measurement of directions and angles, meridians and bearings; traverse survey, types and procedures.

CO 2: Understand and describe levelling and its applications, types of instruments; understand various aspects of table surveying, its principles and methods; computation of volumes.

CO 3: Understand the various aspects of theodolite surveying and methods of running a theodolite survey.

SYLLABUS

Module IV  Table Surveying: Definition, Principles – accessories – Temporary adjustments – Methods of Plane table surveying – Area: Trapezoidal rule, average ordinate rule, Simpson’s 1/3 rule – Coordinate methods. Planimeter: Types Area of zero circle – uses of Planimeter. Volume: Computation of volume by trapezoidal and prismoidal formula – Volume from spot levels, Volume from contour plans. (12 Hours)

- Transit and modified transit rules – Gales Traverse Table – Numerical Problems.  

(12 Hours)

COURSE OUTCOMES
CO 1: Understand and acquire practical knowledge in Chain Surveying and Plane Table Surveying, the instruments used and plotting, measurement of area of plots.

CO 2: Understand and development of practical skills in Compass Surveying, methods of plotting and correction of errors.

CO 3: Understand and get trained to use dumpy levels for surveying and drawing of profiles.
SYLLABUS

Module I  Chain Surveying: Study of instruments used in Chain Surveying – Plotting of a building using Chain Survey – Measurement of area of a given plot.
Plane Table Surveying: Plotting various objects in a given field using Radiation method – Determination of horizontal distance between two inaccessible points by intersection method – Indian Clinometer – Use of Clinometers with plane table.  (32 Hours)

Module II  Compass Surveying: Plotting of a given Traverse – Radiation method – Intersection method – Closed traverse – Correction of error.  (22 Hours)

Module III  Dumpy Level – Drawing of profiles.  (18 Hours)

COURSE OUTCOMES
CO 1: Understand and explain the basic concepts and principles of Remote Sensing, EMR and its characteristics, advantages and limitations of remote sensing; understand and acquire knowledge of the different Remote sensing platforms, the orbits; sensors and types; types of satellite imageries, explain the remote sensing programmes of India and other developed countries.
CO 2: Understand and explain the various aspects of Microwave, Infra-red, Hyper Spectral, Lidar, Thermal, and Radar based remote sensing and their applications; sources of remote sensing data.

CO 3: Understand and describe the different aspects of Visual and Digital Image processing, Image rectification, restoration, corrections, interpretation and classification.

CO 4: Understand the Application of Remote Sensing in various fields like Geology, Hydrology, Agriculture, Disaster management, etc.

**SYLLABUS**

**Module I**
Definition and components of remote sensing – Active and Passive Remote sensing; Electromagnetic radiation and its characteristics – energy interaction with atmosphere and earth surface features – Spectral bands – Atmospheric window – Spectral signature – spectral reflectance profile for vegetation, soil and water; Advantages and limitations of remote sensing – Real and Ideal remote sensing system. (15 Hours)

**Module II**

**Module III**
Microwave, Infra-red, Hyper Spectral, Lidar, Thermal, and Radar based remote sensing and their applications – Online sources of remote sensing data – USGS Earth Explorer, GloVis, Bhuvan – Indian Geo-Platform of ISRO, Copernicus Data Hub. (20 Hours)

**Module IV**
Visual and Digital image processing: Elements of visual image interpretation; Digital image processing in remote sensing – Image rectification and restoration – Geometric correction, radiometric correction, noise removal; Image enhancement; Image classification – Supervised and unsupervised classification. (20 Hours)

**Module V**

**COURSE OUTCOMES**

CO 1: Understand and explain the basic concepts and principles aerial photography, types of aerial photographs and their scale; understand and explain the flight planning and procedures of aerial photography; describe the errors and rectifications in aerial photography.

CO 2: Understand and describe the geometrical characteristics of aerial photographs, their measurements and the instrumentations.

CO 3: Understand and explain stereophotogrammetry, the basics of Analytical Photogrammetry and the concept of Rotation Matrix.

CO 4: Understand and describe the different aspects of Digital Photogrammetry; the concepts and procedures and the instrumentations; get knowledge of the various outputs.

**SYLLABUS**

**Module I** Basics of aerial Photography – Basic Geometry of Aerial Photograph, Central and orthographic projection, Difference between map and aerial photograph, Types of Aerial photographs – wide angle, narrow angle, Horizontal, Vertical, Oblique – Scale and Ground coverage of aerial photographs. (12 Hours)

**Module II** Flight Planning – Crab & Drift – Computation of flight plan – Specification for Aerial photography – Basic horizontal and vertical control – Pre pointing and Post pointing – Planning for Ground Control survey. (13 Hours)

Module IV  Stereophotogrammetry – Orientation of aerial photographs – Inner, Relative and Absolute orientation – Basics of Analytical Photogrammetry – Collinearity and Coplanarity conditions – Concept of Rotation Matrix.

COURSE OUTCOMES

CO 1: Understand and describe the history and development of GPS – the law and concept governing it, and the various GPS system that are in operation; explain the application of GPS.

CO 2: Understand and explain the GPS design objectives, components of GPS, its errors and accuracy; describe the GPS signal structure and characteristics, types and structures of GPS receivers and explain the principles of GPS position fixing.

CO 3: Understand and describe the different GPS survey methods, the procedures adopted, positioning, accuracy checking and post processing measures; understand and explain the GIS and GPS data integration.

CO 4: Acquire information and explain the various applications of GPS technology in modern world.

SYLLABUS

Module I  Introduction to GPS – History and Development – Kepler’s Law – Doppler effect – Positioning concept – Transit, Timation – SECOR-NAVSTAR GPS-GNSS-GLONASS system, Galileo System – Advantages and current limitations of GPS – Applications of GPS.  (10 Hours)

Module II  GPS design objectives – Components of GPS – Space Segment – Control Segment – User Segment – satellite configuration – Orbit determination – GPS Error and Accuracy.  (10 Hours)

Module IV  GPS Survey Methods – Single Point or Point Vs Relative, Static Vs Kinematic, Real time Vs Post mission. Practical GPS survey field procedures: Code and Carrier-based positioning, Accuracy and recording time GPS Data Processing – Ambiguity resolution – Post processing – real-time processing – Accuracy measures – software modules – GIS and GPS data integration. COURSE OUTCOMES
CO 1: Understand and describe the different aspects of digital surveying, its nature and scope and objectives.
CO 2: Understand and explain the different Digital Survey techniques, principles and measurements; understand and describe the errors and accuracy in digital surveying.
CO 3: Understand and describe the digital mapping techniques; explain digital photogrammetry and methods.
CO 4: Understand and explain the applications of digital surveying in various fields in modern world.

SYLLABUS

(6 Hours)
Module II  Modern Survey equipments – Digital level – EMDI – Electronic Theodolite –

Module III

Module IV

Module V

</table>

COURSE OUTCOMES

CO 1: Understand and acquire skills in the field procedures in digital surveying, the instrument characteristics and measurement techniques, and correction of errors.

CO 2: Understand and familiarize with the field survey techniques using Automated Dumpy level, Digital level, Micrometer Theodolite and making measurements in the field after required corrections; acquire knowledge and expertise in Surveying with GPS, the field procedures, mapping, leveling, error corrections, data transfer and preparation of layouts.
SYLLABUS

Module I
EDMI – Instrument characteristics – Field procedures – focusing and sighting – measurement techniques – Error correction. (20 Hours)

Module II
Field survey techniques using automatic level – Automated Dumpy level – Digital level – Micrometer Theodolite – Field procedures – Measuring single angles, Sets of direction and vertical angles – Horizontal collimation error and its adjustments. (35 Hours)

Module III

REFERENCES
2. R. Subramanian: Surveying and Leveling.

Semester VI
CORE COURSE (Main – 2)

GLD1661.1: PROJECT / STUDY TOUR / FIELDWORK / INSTITUTE VISIT
(2 Credits)

Study Tour / Fieldwork / Institute Visit: It is compulsory that every student has to undertake an institute or field visit study tour of not less than one week for acquiring knowledge of modern trends in Digital Surveying, under the guidance of teachers of the Department during the VI semester. Moreover, they have to submit a report countersigned by the Head of the department during the practical examination of GLD1673. If a student fails to undergo the field / institute visit he/she may not be permitted to attend the examination.

Project / Dissertation Work: The Project work will be carried out by the student either as an individual Project with the Digital Surveying aspect. The student has to commence the project work in the Sixth Semester. The Project Report has to be submitted during the Sixth semester examinations which will form a component for the 2 Credits of the Course GLD1661.2. The Project / Dissertation work with credit of 2 in the VI semester examinations will have both internal and external assessment components of 20 marks and 80 marks respectively.

SOCIAL SERVICE AND EXTENSION ACTIVITIES
(1 Credit)
A minimum credit of 1 is allotted for Social Service / Extension Activities in the Sixth Semester.
