UNIVERSITY OF KERALA

B. TECH. DEGREE COURSE

2008 ADMISSION REGULATIONS

and

I – VIII SEMESTERS SCHEME AND SYLLABUS

of

COMPUTER SCIENCE AND ENGINEERING
1. Conditions for Admission

Candidates for admission to the B.Tech degree course shall be required to have passed the Higher Secondary Examination, Kerala or 12th Standard V.H.S.E., C.B.S.E., I.S.C. or any examination accepted by the university as equivalent thereto obtaining not less than 50% in Mathematics and 50% in Mathematics, Physics and Chemistry/ Bio-technology/ Computer Science/ Biology put together, or a diploma in Engineering awarded by the Board of Technical Education, Kerala or an examination recognized as equivalent thereto after undergoing an institutional course of at least three years securing a minimum of 50% marks in the final diploma examination subject to the usual concessions allowed for backward classes and other communities as specified from time to time.

2. Duration of the Course

i) The course for the B.Tech Degree shall extend over a period of four academic years comprising of eight semesters. The first and second semester shall be combined and each semester from third semester onwards shall cover the groups of subjects as given in the curriculum and scheme of examination

ii) Each semester shall ordinarily comprise of not less than 400 working periods each of 60 minutes duration

iii) A candidate who could not complete the programme and pass all examinations within Ten (10) years since his first admission to the B.Tech programme will not be allowed to continue and he has to quit the Programme. However he can be readmitted to the first year of the programme if he/she satisfies the eligibility norms applicable to the regular candidates prevailing at the time of readmission.

3. Eligibility for the Degree

Candidates for admission to the degree of bachelor of technology shall be required to have undergone the prescribed course of study in an institution maintained by or affiliated to the University of Kerala for a period of not less than four academic years and to have passed all the examinations specified in the scheme of study

4. Subjects of Study

The subjects of study shall be in accordance with the scheme and syllabi prescribed

5. Evaluation

Candidates in each semester will be evaluated both by continuous assessment and end semester University examination. The individual maximum marks allotted for continuous assessment and University examination for each subject is as prescribed by the scheme of study.
5.1 Continuous Assessment (C.A)

The marks awarded for the continuous assessment will be on the basis of the day-to-day work, periodic tests (minimum two in a semester) and assignments (minimum of three – one each from each module). The faculty member concerned will do the continuous assessment for each semester. The C.A. marks for the individual subjects shall be computed by giving weight age to the following parameters.

<table>
<thead>
<tr>
<th>Subject</th>
<th>Attendance</th>
<th>Tests</th>
<th>Assignments/Class Work</th>
</tr>
</thead>
<tbody>
<tr>
<td>Theory Subjects</td>
<td>20%</td>
<td>50%</td>
<td>30%</td>
</tr>
<tr>
<td>Drawing</td>
<td>20%</td>
<td>40%</td>
<td>40%</td>
</tr>
<tr>
<td>Practical</td>
<td>20%</td>
<td>40%</td>
<td>40%</td>
</tr>
<tr>
<td>Project Work</td>
<td>20%</td>
<td>Work Assessed by Guide – 50%</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>Assessed by a three member committee out of which one member is the guide – 50%</td>
<td></td>
</tr>
</tbody>
</table>

The C.A. marks for the attendance (20%) for each theory, practical and drawing shall be awarded in full only if the candidate has secured 90% attendance or above in the subject. Proportionate reduction shall be made in the case of subjects in which he/she gets below 90% of the attendance for a subject. The CA marks obtained by the student for all subjects in a semester is to be published at least 5 days before the commencement of the University examinations. Anomalies if any may be scrutinized by the department committee and the final CA marks are forwarded to the university within the stipulated time.

5.2. End Semester University Examinations

i) There will be University examinations at the end of the first academic year and at the end of every semester from third semester onwards in subjects as prescribed under the respective scheme of examinations. Semester classes shall be completed at least 10 working days before the commencement of the University examination.

ii) The examination will be held twice in a year – April/May session (for even semester) and October/November session (for odd semester). The combined 1st and 2nd semester is reckoned as equivalent to an even semester for the purpose of conduct of examination and the University examination will be held during April/May. However VII and VIII Semester examination will be conducted in both the sessions. This schedule will not be changed.

iii) A student will be permitted to appear for the university examination only if he/she satisfies the following requirements

   a. He/she must secure not less than 75% attendance in the total number of working periods during the first year and in each semester thereafter and shall be physically present for a minimum of 60% of the total working periods. In addition, he/she also shall be physically present in at least 50% of total working periods for each subject.

   b. He must earn a progress certificate from the head of the institution of having satisfactorily completed the course of study in the semester as prescribed by these regulations.

   c. It shall be open to the Vice-Chancellor to grant condonation of shortage of attendance on the recommendation of the head of the institution in accordance with the following norms.

   d. The attendance shall not be less than 60% of the total working periods.

   e. He/she shall be physically present for a minimum of 50% of the total working periods.

   f. The shortage shall not be conditioned more than twice during the entire course.

   g. The condonation shall be granted subject to the rules and procedures prescribed by the university from time to time.

   h. The condonation for combined 1st and 2nd semesters will be reckoned as a single condonation for attendance purposes.
iv) A student who is not permitted to appear for the University examinations for a particular semester due to the shortage of attendance and not permitted by the authorities for condonation of shortage of attendance shall repeat the semester when it is offered again. This provision is allowed only once for a semester.

v) The university will conduct examinations for all subjects (Theory, Drawing & Practical).

vi) The scheme of valuation will be decided by the chief examiner for theory / drawing subjects.

vii) For practical examinations, the examiners together will decide the marks to be awarded. The student shall produce the certified record of the work done in the laboratory during the examination. The evaluation of the candidate should be as per the guidelines given in the syllabus for the practical subject.

6. Letter Grades

For each subject in a semester, based on the total marks obtained by the student in the University examination and Continuous assessment put together a letter grade (S, A+, A, B+, B, C+, C, D, E and F) will be awarded. All letter grades except ‘F’ will be awarded if the marks for the University examination is 40 % or above and the total mark (C.A marks + University Exam mark) is 50 % or above. No absolute mark will be indicated in the grade card. Letter grade corresponding to total marks (C.A marks + University Exam mark) and the corresponding grade point in a ten-point scale is described below.

<table>
<thead>
<tr>
<th>% of Total marks (C.A marks + University Exam mark)</th>
<th>Letter Grade</th>
<th>Grade Point (G.P)</th>
<th>Remarks</th>
</tr>
</thead>
<tbody>
<tr>
<td>90 % and above</td>

<td>F</td>
<td>0</td>
<td>Failed</td>
</tr>
</tbody>
</table>

7. Grade Point Average (GPA) and Cumulative Grade Point Average (CGPA)

Grade point average is the semester wise average points obtained by each student in a 10-point scale. GPA for a particular semester is calculated as per the calculation shown below.

\[
GPA = \frac{\sum \text{Credit} \times \text{GP obtained for the subject}}{\sum \text{credit for subject}}
\]

Cumulative Grade point Average (CGPA) is the average grade points obtained by the students till the end of any particular semester. CGPA is calculated in a 10-point scale as shown below.

\[
CGPA = \frac{\sum \text{Credits for semester} \times \text{GPA obtained for the semester}}{\sum \text{credits for the semester}}
\]
GPA and CGPA shall be rounded to two decimal points. The Grade card issued to the students shall contain subject number and subject name, credits for the subject, letter grades obtained, GPA for the semester and CGPA up to that particular semester. In addition to the grade cards for each semester all successful candidate shall also be issued a consolidated statement grades. On specific request from a candidate and after remitting the prescribed fees the University shall issue detailed mark to the individual candidate.

8. Minimum for a pass

a) A candidate shall be declared to have passed a semester examination in full in the first appearance if he/she secures not less than 5.5 GPA with a minimum of ‘E’ grade for the all individual subject in that semester.

b) A candidate shall be declared to have passed in an individual subject of a semester examination if he/she secures grade ‘E’ or above.

c) A candidate who does not secure a full pass in a semester examination as per clause (a) above will have to pass in all the subjects of the semester examination as per clause (b) above before he is declared to have passed in that semester examination in full.

9. Improvement of Grades

i) A candidate shall be allowed to re-appear for a maximum of two subjects of a semester examination in order to improve the marks and hence the grades already obtained subject to the following conditions

   a) The candidate shall be permitted to improve the examination only along with next available chance.

   b) The candidate shall not be allowed to appear for an improvement examination for the subjects of the VII & VIII semesters

   c) The grades obtained by the candidate for each subject in the improvement chance he has appeared for or the already existing grades – whichever is better will be reckoned as the grades secured.

   d) First & Second semester will be counted as a single chance and they can improve a maximum of three subjects

ii) A candidate shall be allowed to repeat the course work in one or more semesters in order to better the C.A. marks already obtained, subject to the following conditions

   a) He/she shall repeat the course work in a particular semester only once and that too at the earliest opportunity offered to him/her.

   b) He/she shall not combine this course work with his/her regular course work

   c) He/she shall not be allowed to repeat the course work of any semester if he has already passed that semester examination in full

   d) The C.A marks obtained by the repetition of the course work will be considered for all purposes

iii) A candidate shall be allowed to withdraw from the whole examination of a semester in accordance with the rules for cancellation of examination of the University of Kerala.

10. Classification of Successful candidates

i) A candidate who qualifies for the degree passing all the subjects of the eight semesters within five academic years (ten consecutive semesters after the commencement of his/her course of study) and secures not less than 8 CGPA up to and including eighth semester (overall CGPA) shall be declared to have passed the B.Tech degree examination in FIRST CLASS WITH DISTINCTION
ii) A candidate who qualifies for the degree passing all the subjects of the eight semesters within five academic years (ten consecutive semesters after the commencement of his/her course of study) and secures less than 8 CGPA but not less than 6.5 CGPA up to and including eighth semester shall be declared to have passed the B.Tech degree examination in FIRST CLASS.

iii) All other successful candidates shall be declared to have passed the B.Tech Degree examination in SECOND CLASS.

iv) Successful candidates who complete the examination in four academic years (Eight consecutive semesters after the commencement of the course of study shall be ranked branch-wise on the basis of the CGPA in all eight semesters put together. In the case of a tie in the CGPA the total marks of the students who have got same CGPA shall be considered for finalizing the rank. Students who pass the examination in supplementary examination are also covered under this clause.

11. Educational Tour

a) The students may undertake one educational tour preferably after fourth semester of the course and submit a tour report.

b) The tour may be conducted during the vacation / holidays taking not more than 5 working days, combined with the vacation / holidays if required. Total number of Tour days shall not exceed 15 days.

c) The tour period shall be considered as part of the working periods of a semester.

12. Revision of Regulations

The university may from time to time revise, amend or change the regulations, curriculum, scheme of examinations and syllabi. These changes unless specified otherwise, will have effect from the beginning of the academic year / semester following the notification of the University.

**Total Marks** | **1500**

The subject 08.109 shall be handled by the Department of Electronics and Communication Engineering.
08.101 ENGINEERING MATHEMATICS I

L-T-P : 2-1-0  Credits: 6

MODULE I
Applications of differentiation:- Definition of Hyperbolic functions and their derivatives- Successive differentiation- Leibnitz’ Theorem(without proof)- Curvature- Radius of curvature- centre of curvature-Evolute ( Cartesian, polar and parametric forms)
Partial differentiation and applications:- Partial derivatives- Euler’s theorem on homogeneous functions- Total derivatives- Jacobians- Errors and approximations- Taylor’s series (one and two variables) - Maxima and minima of functions of two variables - Lagrange’s method- Leibnitz rule on differentiation under integral sign.
Vector differentiation and applications :- Scalar and vector functions- differentiation of vector functions-Velocity and acceleration- Scalar and vector fields- Operator \( \nabla \) - Gradient- Physical interpretation of gradient-Directional derivative- Divergence- Curl- Identities involving \( \nabla \) (no proof) - Irrotational and solenoidal fields – Scalar potential.

MODULE II
Laplace transforms:- Transforms of elementary functions - shifting property- Inverse transforms- Transforms of derivatives and integrals- Transform functions multiplied by \( t \) and divided by \( t \) - Convolution theorem(without proof)-Transforms of unit step function, unit impulse function and periodic functions-second shifting theorem- Solution of ordinary differential equations with constant coefficients using Laplace transforms.

MODULE III

08.102 ENGINEERING PHYSICS

L-T-P : 2-1-0    Credits: 6

MODULE I
Oscillations and Waves

Electromagnetic Theory
Del operator – grad, div, curl and their physical significance. Concept of displacement current. Deduction of Maxwell’s equations. Prediction of electromagnetic waves. Transverse nature of electromagnetic waves. E and H are at right angles. Poynting’s theorem (qualitative only)

Physics of Solids

MODULE II
Interference of Light

Diffraction of Light

Polarization of Light

Special Theory of Relativity

MODULE III
Quantum Mechanics

Statistical Mechanics

Laser

LIST OF DEMONSTRATION EXPERIMENTS
2. Air Wedge – Diameter of a thin wire
5. Laser – Diffraction at a narrow slit.
6. Laser – Diffraction at a straight wire or circular aperture.
11. Computer stimulation – study of E & H. (Gauss’ law & Ampere’s law)

Pattern of Question Paper
University examination is for a maximum of 100 marks, in 3 hour duration. The syllabus is spread in 3 modules. The question paper will consist of two parts (A and B).
Part A contains short answer questions for 40 marks. This part contains 10 questions without any choice, each of 4 marks (uniformly taken from all modules).
Part B contains long answer questions for 60 marks. From each module, this part contains 3 questions out of which 2 are to be answered, each of 10 marks. Long answer questions from all the 3 modules will form 60 marks.
08.103 ENGINEERING CHEMISTRY

L-T-T : 2-1-0  

Credits: 6

MODULE I

**Corrosion and its control** - Theories of corrosion (chemical corrosion and electrochemical corrosion)- Galvanic series- Types of corrosion (Concentration cell corrosion, Stress corrosion, Galvanic corrosion) - Factors affecting corrosion (nature of metal and nature of environment) and different methods of corrosion control (corrosion inhibitors, cathodic protection). (5hrs)

**Protective coatings** - Metallic coatings- Chemical conversion coatings- paint (4hrs)

MODULE II

**Water treatment** - Types of hardness- Degree of hardness- Related problems- Estimation of hardness- by EDTA method- Sludge and scales in boilers- Priming and foaming- Boiler corrosion-Water softening methods, Lime-soda process, Ion exchange methods-Internal treatments (colloidal, carbonate, phosphate and calgon conditioning)- Domestic water treatment- Methods of disinfection of water-Desalination process (Reverse osmosis, electro dialysis- Distillation). (12hrs)

**Environmental damages and prevention** - Air pollution- CFCs and ozone depletion- Alternative refrigerents- Green house effect-Water pollution- BOD and COD- Waste water treatment- Aerobic - Anaerobic and USAB processes. (3hrs)

**Thermal methods of analysis** -Basic principles involved in Thermo gravimetry, Differential thermal analysis and applications. (2hrs)

**Spectroscopy** - Molecular energy levels-Types of molecular spectra- Electronic spectra (Classification of electronic transitions- Beer Lamberts law, Vibrational spectra (mechanism of interaction and application), Rotational spectra (Determination of bond length and application). NMR spectra (Basic principle, chemical shift, spin-spin splitting) (6hrs)

**Chromatography** - General principles- High performance liquid chromatography- Gas chromatography. (2hrs)

MODULE III

**Polymers** - Classifications- Mechanism of polymarisation (Addition, free radical, cationic, anionic and coordination polymerisation)- Thermoplastics and thermosetting plastics-Compounding of plastics-Moulding techniques of plastics (Compression, Injection, Transfer and Extrusion moulding)-Preparation, properties and uses of PVC, PVA, PMMA, Nylon, PET, Bakelite, Urea formaldehyde resin- Silicon polymers- Biodegradable plastics. Elastomers- structure of natural rubber- vulcanisation- synthetic rubbers (Buna-S, Butyl rubber and Neoprenre) (12hrs)

**Organo electronic compounds** -Super conducting and conducting organic materials like Polyaniline, polyacetylene and [polypyrro] and its applications. (2hrs)

**Fuels** - Calorific value- HCV and LCV-Experimental determination of calorific value-Theoretical calculation of calorific value by Dulongs formula - Bio fuels -Bio hydrogen and Bio-diesel (5hrs)

**Lubricants** - Introduction-Mechanism of lubrication- solid and liquid lubricant- Properties of lubricants- Viscosity index- flash and fire point- cloud and pour point- aniline value. (4hrs)

**Cement** - Manufacture of Portland cement- Theory of setting and hardening of cement (2hrs)
LAB EXPERIMENTS (DEMONSTRATION ONLY)
1. Estimation of total hardness in water using EDTA.
2. Estimation of chloride ions in domestic water.
3. Estimation of dissolved oxygen.
4. Estimation of COD in sewage water.
5. Estimation of available chlorine in bleaching powder.
8. Determination of flash and fire point of a lubricating oil by Pensky Marten’s apparatus.
12. Determinations of PH using glass electrode and quinhydrone electrode.

INTRODUCTION: Introduction to technical drawing and its language. Lines, lettering, dimensioning, scaling of figures, symbols and drawing instruments. (1 sheet practice)

MODULE I
PLAIN CURVES: Conic sections by eccentricity method. Construction of ellipse: (i) Arc of circles method (ii) Rectangle method (ii) Concentric circles method. Construction of parabola (i) Rectangle method (ii) Tangent method. Construction of hyperbola (i) Arc of circles method (ii) given ordinate, abscissa and the transverse axis (iii) given the asymptotes and a point on the curve. Construction of Tangent and Normal at any point on these curves
MISCELLANEOUS CURVES: Construction of Cycloid, Epicycloid and Hypocycloid, Involute of a circle. Archimedian spiral, Logarithmic spiral and Helix. Construction of Tangent and Normal at any point on these curves
PROJECTION OF POINTS AND LINES: Types of projections, Principles of Orthographic projection. Projections of points and lines. Determination of true length, inclination with planes of projection and traces of lines.

MODULE II
PROJECTION OF SOLIDS: Projection of simple solids such as prisms, pyramids, cone, cylinder, tetrahedron, octahedron, sphere and their auxiliary projections.
SECTION OF SOLIDS: Types of cutting planes, section of simple solids cut by parallel, perpendicular and inclined cutting planes. Their projections and true shape of cut sections.
DEVELOPMENT OF SURFACES: Development of surfaces of (i) simple solids like prisms, pyramids, cylinder and cone (ii) Cut regular solids.

MODULE III
ISOMETRIC PROJECTION: Isometric scale, Isometric view and projections of simple solids like prisms, pyramids, cylinder, cone sphere, frustum of solids and also their combinations.
INTERSECTION OF SURFACES: Intersection of surfaces of two solids as given below.
(i) Cylinder and cylinder
(ii) Prism and prism.
(iii) Cone and Cylinder
(Only cases where the axes are perpendicular to each other and intersecting with or without offset.)

CAD: Introduction to CAD systems, Benefits of CAD, Various Soft wares for CAD, Demonstration of any one CAD software.

General Note:
(i) First angle projection to be followed
(ii) Question paper shall contain 3 questions from each module, except from CAD.
Students are required to answer any two questions from each module.
(iii) Distribution of marks
Module -I 2 x 16 = 32
Module -II 2 x 17 = 34
Module III 2 x 17 = 34

**08.105 ENGINEERING MECHANICS**

**L-T-P : 2-1-0**

**Credits: 6**

**MODULE I (20 HRS)**

Idealizations of Mechanics- Elements of vector algebra

**Statics** of rigid bodies-Classification of force systems- principle of transmissibility of a force- composition and resolution- Resultant and Equilibrant of coplanar concurrent force systems-various analytical methods- - Lami’s theorem- method of resolution- Conditions of equilibrium-

Moment of a force, couple, properties of couple- Varignon’s theorem- Resultant and equilibrant of coplanar non-concurrent force systems- Conditions of equilibrium. Equilibrium of rigid bodies-free body diagrams.(simple problems)

Types of supports - types of beams - types of loading- Support reactions of simply supported and overhanging beams under different types of loading.

Forces in space, equations of equilibrium, Vector approach.

**MODULE II (20 HRS)**

Properties of surfaces- centroid of composite areas- Theorems of Pappus-Gouldinus- Moment of inertia of areas, Parallel and perpendicular axes theorems- Radius of Gyration- moment of inertia of composite areas.

**Dynamics: Kinematics**-Combined motion of translation and rotation-instantaneous centre, motion of link, motion of connecting rod and piston, wheel rolling without slipping.

Relative velocity - basic concepts-analysis of different types of problems

**Kinetics**- Newton’s laws of translatory motion- D’Alembert’s principle- Motion of lift- Motion of connected bodies.

**MODULE III (20 HRS)**

Collision of elastic bodies-Law of conservation of momentum-Direct and oblique impact between elastic bodies and impact with fixed plane.

Curvilinear motion- D’Alembert’s principle in curvilinear motion- Mass moment of inertia of rings, solid discs and solid spheres (no derivations required)Angular momentum-Angular impulse.

Kinetics of rigid bodies under combined translatory and rotational motion – work – energy principle for rigid bodies.

Centrifugal and centripetal forces – motion of vehicles on curved paths in horizontal and vertical planes – super elevation – stability of vehicles moving in curved paths (qualitative ideas only).

**REFERENCES:**

**Note :** Question For University Examination:- Part A – 8 compulsory questions covering entire syllabus, 5 marks each. (5 x 8 = 40) Part B – Three questions of 10 marks from each module, out of which two should be answered (10 x 2 x 3 = 60).
08.106  BASIC CIVIL ENGINEERING

L-T-P : 2-1-0                                         Credits: 6

MODULE I
Surveying: Object and Principles of Surveying.
Linear Measurements: Direct measurements - Tape & chain only - Ranging out survey lines-Taking measurements of sloping ground - Errors - Tape correction (problems).
Levelling: Levelling instruments - Level (Dumpy Level, Tilting Level ) Levelling Staff. Measurements in levelling - Temporary adjustments of a level, holding the staff, reading the staff - Principles of leveling - recording measurements in the field book - reduction of level - height of collimation method only (simple examples).
Contour maps (Brief description only). Computation of areas - Mid ordinate rule, average ordinate rule, Trapezoidal rule, Simpson’s rule (examples)- Introduction to Distomat, Total Station & GPS (Brief description only)

MODULE II
Building construction: Selection of site for buildings - types of buildings - Components of buildings.
Foundation: Different types - Spread footing, Isolated footing, Combined footing, Mat foundation, Pile foundation (description only).
Safe Bearing Capacity of Soil: Importance of determination of the Safe Bearing Capacity of Soil (brief description only).
Super structure: Masonry - stone masonry, brick masonry –Types- desirable qualities of stone and brick.
Partition: Materials used for making partition - plywood, particle boards & glass.
Doors, windows & ventilators : Types - materials used for the construction of doors and windows - wood, steel & Aluminium.
Plastering: Mortar – properties - Preparation of Cement mortar
Roofing: Selection of type of roof -flat roof, sloping roof -Concrete roof, tiled roof. Selection of roof covering materials. GI Sheet , AC Sheet, PVC Sheet

MODULE III
Concrete: Ingredients- cement, aggregate, and water. Qualities of ingredients (brief description only).
Tests on Cement - consistency, initial and final setting times. Compressive strength -IS Specifications.
Aggregates – desirable qualities of fine and coarse aggregates
Steel-common types used in construction- Mild Steel, HYSD Steel and their properties.
Reinforced Cement Concrete (RCC)-advantages of RCC over Plain Cement Concrete.
Elementary ideas on pre-cast and pre-stressed concrete constructions.
Building services – vertical transportation – stairs – types, escalators and elevators, ramps (brief description only). Plumbing services- brief description of water supply and sewage disposal arrangements for residential buildings.

Note: The question paper will consists of two parts. Part I and part II.
Part I is Compulsory covering the entire syllabus, for 40 marks. It contains 8 questions of 5 marks each.
Part II is to cover 3 modules. There will be two questions (20 marks each) from each module out of which one from each module is to be answered. (20 X 3 = 60)
**08.107  BASIC MECHANICAL ENGINEERING**

**L-T-P/D : 3-1-0**

**Credits: 6**

**MODULE I**

Thermodynamics: Basic concepts and definitions of Zeroth law, First law, Second law of thermodynamics-concept of reversibility and entropy, p-v and T-s diagrams
Air cycles: Carnot, Otto and Diesel cycles-Air standard efficiency (simple problems)
IC Engines: Working and comparison of two stroke and four stroke petrol and diesel engines - general description of various systems using block diagrams – air system, fuel system, ignition system and governing system. A brief description of CRDI, MPFI, GDI and Hybrid Vehicles
Steam boilers: Classification – Cochran boiler, Babcock and Wilcox boiler, Benson boiler- fluidized bed combustion,

**MODULE II**

Principles and fields of application of - compressors - reciprocating and centrifugal, blower, pumps-reciprocating, centrifugal and jet pumps, steam and hydraulic turbines- impulse and reaction, gas turbine cycles-open and closed
Elementary ideas of hydro electric, thermal and nuclear power plants
Refrigeration & Air Conditioning: Refrigerants, CFC free refrigerants. Vapor compression refrigeration system, Comfort and Industrial air conditioning-typical window air conditioning unit (general description only).

**MODULE III**

Mechanical Power transmission systems: Belt, rope and gear drives-types, comparison and fields of application-velocity ratio-slip (simple problems) friction disc, single plate clutch, gear trains (no derivations).
Manufacturing processes: Elementary ideas of casting, forging, rolling, welding, soldering and brazing
Machining processes- turning, taper turning, thread cutting, shaping, drilling, grinding, milling (simple sketches and short notes).
Non conventional machining - Electro discharge machining (EDM) and Electro chemical machining (ECM)
Principle, application and advantages of C N C machine

**REFERENCES**

2. Gill, Smith and Zuirys, “Fundamentals of IC Engines”
3. Amstead, Ostwald and Begeman, “Manufacturing processes”
5. Roy and Choudhary, “Elements of Mechanical Engineering”
6. Hajra Choudhary, “Workshop Technology”
7. R K Bensal, “Fluid mechanics and machines”

**Note:** Lectures are to be supplemented by demonstration in laboratories.

*The question paper will consist of two parts.*

*Part I is to be compulsory for 40 marks. This may contain 10 questions of 4 marks each.*

*Part II is to cover 3 modules. There can be 3 questions from each module (10 marks each) out of which 2 are to be answered.*
08.108   BASIC ELECTRICAL AND ELECTRONICS ENGINEERING

L-T-P : 2-1-0   Credit 6

MODULE I

MODULE II

MODULE III
Diodes - PN junction diodes, V-I characteristics, dynamic & static resistance, principle of working and V-I characteristics of Zener diode, principle of Photo diode, Solar cell, & LED. Rectifiers & power supplies - block diagram description of a dc power supply, circuit diagram & working of half-wave & full wave rectifier, final equations of Vrms, Vdc, ripple factor and peak inverse voltage in each case, principle of working of series inductor and shunt capacitor filters. Working of simple zener voltage regulator. Power devices – V – I characteristics and applications of SCR and Triac Working principle of UPS and SMPS. Transducers – Resistance strain guage, thermistor, LVDT.
REFERENCES
5. TP Imthias Ahmed, B. Premlet, “Introduction to Electrical Engineering”, Phaser Books, Kollam

Note: The question paper will consist of two parts. Part – A is to be compulsory for 40 marks (10 questions of 4 marks each). Part-B is to cover 3 modules for 60 marks. (50% choice- One out of two or two out of four from each module).
08.109 BASIC COMMUNICATION AND INFORMATION ENGINEERING

L-T-P : 2-1-0  
Credits: 6

MODULE I (Qualitative Treatment)
(a) Bipolar junction transistors: NPN & PNP transistors, structure, typical doping, working of NPN transistor, concepts of common base, common emitter & common collector configurations, current gain of each, input & output characteristics of common emitter configuration, comparison of three configurations with reference to voltage & current gain, input & output resistances and applications. (6 hrs)
(b) Field effect Transistors: basic principles of JFET, MESFET and MOSFET, comparison with BJT. (3 hrs)
(c) Amplifiers & Oscillators: circuit diagram & working of common emitter amplifier, function of each component in the circuit, need of proper biasing, frequency response, voltage gain and 3dB bandwidth, concepts of class A, B, AB and Class C power amplifiers, circuit diagram & working of push pull amplifiers, concepts of feedback, working principles of oscillators, circuit diagram & working of RC phase shift oscillator (7 hrs)
(d) Integrated circuits: advantages of ICs, analog and digital ICs, functional block diagram of operational amplifier, ideal operational amplifier, use as inverting amplifier, non inverting amplifier, summing amplifier, integrator and comparator. (4 hrs)
(e) Digital ICs: logic gates, realization of logic functions, principle of combinational and sequential logic circuits, flip flop (JK), logic families: TTL and CMOS Logic (No internal diagram) (4 hrs)
(f) IC Fabrication: purification of silicon, crystal growth, wafer preparation. unit process: oxidation, diffusion, ion implantation, epitaxy, deposition, photolithography. (4 hrs)

MODULE II (Qualitative Treatment)
(a) Measurements: principle and block diagram of analog and digital multimeter, working principle of CRT, block diagram of CRO, measurements using CRO, principle of digital storage oscilloscope, and principle of function generator. (5 hrs)
(c) Color television: TV Standards, interlaced scanning, block diagram of PAL TV transmitter & receiver, basic principles of cable TV, CCTV system, basic principles of HDTV, basic principles of LCD & Plasma displays. (5 hrs)
(d) Radar and navigation: principle of radar and radar equation, block schematics of pulsed radar, factors affecting range, applications of radar in measurements and navigation. (4 hrs)
(e) Satellite communication: microwave frequency bands, concept of geo-stationary satellite, frequency bands used, satellite transponder, block diagram of earth station transmitter & receiver, advantages of satellite communication, principle of Global Positioning System (GPS). (3 hrs)
(f) Optical communication: block diagram of the optical communication system, principle of light transmission through fiber, concepts of Single Mode and Multi Mode optical fiber, working principle of source (semiconductor Laser) & detector (PIN,APD), advantages of optical communication. (5 hrs)

MODULE III (Qualitative Treatment)
(a) Computer Architecture: functional units: basic concept of ALU- data path and control, memory hierarchy, caches, main memory, virtual memory, operating systems, microprocessors - functional block diagram of 8085 (9 hrs)
(b) Data communication: overview, analog and digital data transmission, transmission media, digitization of wave forms, PCM, digital modulation techniques- ASK, PSK, FSK, basic concepts of error detection, parity checking. (6 hrs)
(c) Mobile communication: basic principles of cellular communications, concepts of cells, frequency reuse, principle and block diagram of GSM, principle of CDMA, WLL & GPRS technologies. (4 hrs)
(d) **Internet Technology**: concepts of networking: client-server computing, IP addresses, domain names, network interface unit-modem, switching technologies- circuit switching and packet switching, LAN, MAN, WAN & World Wide web, network topologies, communication protocols-TCP/IP, Introduction to web languages-HTML, XML, internetworking concepts, network devices- basic principles of router, bridge, switch, network security- Firewall. (7 hrs)

**REFERENCES**

6. David A. Bell, *Electronic Instrumentation and Measurements*, PHI [Module 2(a)]

This subject shall be handled by faculty of Dept. of Electronics and Communication in the Colleges.

**Question Paper**

The question paper shall consist of two parts. Part I is to cover the entire syllabus, and carries 40 marks. This shall contain 10 compulsory questions of 4 marks each. Part II is to cover 3 modules, and carries 60 marks. There shall be 3 questions from each module (10 marks each) out of which 2 are to be answered.
08.110  ENGINEERING WORKSHOPS

L-T-P : 0-0-2  

Credits: 4

A.  Carpentry:

B.  Fitting:
Study of tools, Practice in filing, cutting, drilling and tapping. Male and female joints, Stepped joints.

C.  Sheet Metal Work:
Study of tools. Selection of different gauge GI sheets for jobs. Practice on riveted joints. Preparing tube joints, frustums, trays and containers.

D:  Plumbing:
Study of tools. Details of plumbing work in domestic and industrial applications. Study of pipe joints, cutting, threading and laying of pipes with different fittings using PVC pipes. Use of special tools in plumbing work.

E.  Foundry:
Study of tools. Preparation of sand, moulding practice and demonstration of casting.

F.  Welding:
Study of welding machines. Straight line practices, Making of Butt joint, T joint and Lap joint.

G.  Smithy:
Study of tools. Demonstration on forging of square prism, hexagonal bolt, T bolt and Eye bolt.

H.  Machine Tools:
Study and demonstration on working of machine tools. Lathe and Drilling machine.

NOTE:  For the university examination the student shall be examined in sections A, B, C, D and E only.

Module I (16 hours)

Module II (18 hours)

Fourier Series: Fourier series of periodic functions of period \(2\pi\) and \(2l\). Dirichlet’s condition for convergence. Odd and even functions. Half range expansions.

Fourier Transforms: Fourier integral theorem (no proof) – Fourier transforms – Fourier sine and cosine transforms, inverse Fourier transforms, properties.

Module III (18 hours)

Reference Books

Internal Continuous Assessment (Maximum Marks-50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, programming exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A: Short answer questions
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

PART B: Descriptive/Analytical/Problem solving questions
Candidates have to answer one question out of two or two questions out of four from each module.

Maximum Total Marks: 100
Module I (15 hours)

Module II (20 hours)

Module III (17 hours)

Text Books:
2. Programming with C – B.S. Gottfried, Schaum’s Series, TMH.
5. Fundamentals of computers – V. Rajaraman, PHI

Reference Books:
2. Programming with ANSI and Turbo C – Ashok N. Kamthane, Pearson Education India

Internal Continuous Assessment (Maximum Marks: 50)

University Examination Pattern

**PART A: Short answer questions**

10 x 4 marks = 40 marks

All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

**PART B: Descriptive/Analytical/Problem solving questions**

3 x 20 marks = 60 marks

Candidates have to answer one question out of two or two questions out of four from each module.

*Maximum Total Marks: 100*
Module I (11 hours)
**Statement calculus:** Statements, connectives, statement formulas, truth tables, conditional, biconditional, well formed formulas, tautology, contradiction, equivalence of formulas, duality law, tautological implications, formulas with distinct truth tables, functionally complete set of connectives, two state devices and statement logic, Theory of inference for statement calculus, validity using truth tables, rules of inference, consistency of premises and indirect method of proof. **Predicate calculus:** predicates, statement functions, variables and quantifiers, predicate formulas, free and bound variables, universe of discourse, theory of inference for predicate calculus.

Module II (14 hours)
**Set Theory:** basic concepts of set theory. **Representation of discrete structures:** data structures, storage structures, sequential allocation, pointers and linked allocation. **Relations and ordering:** relations – properties of binary relations in a set, relation matrix and graph of a relation, Partition and covering of a set, equivalence relations, compatibility relations, composition of binary relations, Partial ordering, Partially ordered set - representation. **Functions:** one to one, onto, bijection, composition of functions, inverse functions, binary and n-ary operations, natural numbers – Peano Axioms and Mathematical induction, Pigeon hole principle. Cardinality – countable and uncountable sets, Cantor's theorem of power sets. Recursion – recursion in programming languages.

Module III (14 hours)
**Algebraic structures:** simple algebraic systems and general properties, morphism, congruence relation, subalgebra, product algebra and factor algebra, semigroups & monoids - morphism, cyclic semi groups and monoids, subsemigroups and submonoids, groups – abelian groups, permutation groups, cyclic groups, subgroups and homomorphism, cosets and Lagrange's theorem, normal subgroups. Algebraic systems with two binary operations – ring, integral domain, field, error detection and correction using group codes. Lattices as partially ordered sets, properties of lattices, lattices as algebraic systems, sub lattices, direct product and homomorphism, Boolean algebra, subalgebra, direct product and homomorphism, Boolean functions. Basic concepts of graph theory - basic definitions of graphs, paths, reachability and connectedness (No theorems and proofs).

**Text Books:**
1. Discrete mathematical structures with applications to computer science – J.P. Tremblay and R. Manohar, TMH

**Reference Books:**
1. Elements of discrete mathematics - C.L. Liu, TMH

**Internal Continuous Assessment (Maximum Marks-50)**
- 25 Marks - Tests (minimum 2)
- 15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, programming exercises, etc.
- 10 Marks - Regularity in the class

**University Examination Pattern**

**PART A:** Short answer questions 10 x 4 marks=40 marks
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

**PART B:** Descriptive/Analytical/Problem solving questions 3 x 20 marks=60 marks
Candidates have to answer one question out of two or two questions out of four from each module.

Maximum Total Marks: 100
Module I (12 hours)
Design and analysis of Rectifiers, Filters, Clippers, Clamps, Regulators, Differentiators, Integrators-RC circuits-response of high pass / low pass RC to sine wave, pulse and square wave inputs- principle of operation of inverters, uninterrupted power supplies, switched mode power supplies

Module II (13 hours)
Transistor amplifiers- classification – small signal analysis – voltage divider bias – emitter follower configuration- feed back configurations- RC phase shift, wein bridge, Colpitts, Hartley oscillator( No derivations), Multivibrators- monostable, bistable and astable- 555 timer and applications ( No derivations)

Module III (14 hours)
Operational Amplifiers, Block diagram, characteristic features of OP Amps, ideal OP Amps, common mode and difference mode- summing amplifier, differential amplifier, inverting, non inverting amplifiers. Active filters, Applications, Chebyshev and Butterworth filters, Low pass Butterworth Filter, High pass Butterworth Filter, Band Pass and Band rejection filters, Oscillators- Wein Bridge and Phase shift Oscillators

Text Books:
1. Electronic Devices and Circuits Theory – Boylestead and Nashelky, PHI

Reference Books:

Internal Continuous Assessment (Maximum Marks-50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, hardware/software/simulation exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A: Short answer questions
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

PART B: Descriptive/Analytical/Problem solving questions
Candidates have to answer one question out of two or two questions out of four from each module.

Maximum Total Marks: 100
08.305 DIGITAL SYSTEM DESIGN (R F) 2 – 2 – 0

Module I (16 hours)

Module II (18 hours)

Module III (18 hours)

Text Books:
3. Digital Electronics Principles and Applications – Tokheim, TMH.

Reference Books:
1. Digital Electronics: an Introduction to Theory and Practice – W.H. Gothman, PHI.

Internal Continuous Assessment (Maximum Marks-50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, hardware/PC interface exercises, simulation exercises using technical computing software etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A: Short answer questions 10 x 4 marks=40 marks
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

PART B: Descriptive/Analytical/Problem solving questions 3 x 20 marks=60 marks
Candidates have to answer one question out of two or two questions out of four from each module.

Maximum Total Marks: 100
Module I (10 hours)

Module II (14 hours)

Module III (15 hours)

Text Books:

Reference Books:
5. The indispensable PC Hardware Book – H.P. Messmer
6. Upgrading and Repairing PCs – Scottmuller, Pearson Education.

Internal Continuous Assessment (Maximum Marks-50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software/hardware exercises etc.
10 Marks - Regularity in the class

08.307  ELECTRONIC CIRCUITS LAB  (R F)  0 – 0 – 4

2. CE characteristics of BJT.
3. CS characteristics of FET.
4. Rectifier circuits with and without filters.
5. RC lowpass and highpass circuits.
6. Differentiating and Integrating circuits.
7. Clipping and Clamping circuits.
8. Simple zener diode regulator.
9. RC coupled amplifier using BJT.
10. RC phase shift oscillator using BJT.
11. Astable and Monostable multivibrators using 555 Timer IC.
12. Astable and Monostable multivibrators using 741 OPAMP.

03.308 PROGRAMMING LAB (R F) 0 – 0 – 4

Familiarization of operating systems like DOS and Windows.
Programming exercises in C based on the course 08.302 Problem Solving and Programming in C.
The exercises may include the following:

- Programs using –
  - Decision making, branching and looping
    - if, if … else statements
    - switch, goto statements
    - while, do, for statements
  - Arrays and strings
    - one-dimensional, two-dimensional, multidimensional arrays
    - reading/writing strings
    - operations on strings
    - string handling
  - Functions
    - user defined functions
    - function calls, arguments & return values
    - nesting of functions
    - recursive functions
    - passing arrays and strings to functions
  - Structures and unions
    - copying and comparing structure variables
    - arrays of structures
    - arrays within structures
    - structures within structures
    - structures and functions
    - unions
  - Pointers
    - pointers and arrays
    - pointers and character strings
    - array of pointers
    - pointers and functions
    - pointers and structures
  - Files, memory allocation, bit-level programming
    - files → defining, opening/closing, input-output operations
    - command line arguments
    - memory allocation functions
    - bit-wise operators

Internal Continuous Assessment (Maximum Marks-50)

- 20 Marks - Tests (minimum 1)
- 20 Marks - Up-to-date lab work, problem solving capability, keeping track of rough record and fair record, term projects, assignment - programming exercises, etc.
- 10 Marks - Regularity in the class

University Examination Pattern (Maximum marks – 100)

Marks should be awarded as follows:

- 20 Marks - Algorithm/Design.
- 25 Marks - Viva voce
- 30 marks - Implementing the work/Conducting the experiment.
- 25 Marks - Output/Results and inference.

General instructions:
- Evaluation is a serious process that is to be conducted under the equal responsibility of both the internal and external examiners.
- The number of candidates evaluated per day should not exceed 20
Module I (17 hours)

**Complex Differentiation:** Limits, continuity and differentiation of complex functions. Analytic functions – Cauchy Reimann equations in Cartesian form (proof of necessary part only). Properties of analytic functions – harmonic functions. Milne Thomson method.

**Conformal mapping:** the transformations \( w = \sqrt{z}, \ w = z^2, \ w = z + \frac{1}{z}, \ w = \sin z, \ w = \cos z, \) Bilinear transformation.

Module II (17 hours)

**Complex Integration:** Line integral – Cauchy’s integral theorem – Cauchy’s integral formula. Power series – radius of convergence – Taylors and Laurents series – zeros and singularities – residues and residue theorem. Evaluation of real definite integrals – \( \int_{0}^{\frac{\pi}{2}} f(\sin \theta, \cos \theta) d\theta, \int_{-\infty}^{\infty} f(x) dx \) with no poles of \( f(z) \) on the real axis (proof of theorems not required).

Module III (18 hours)

Reference Books

Internal Continuous Assessment (Maximum Marks-50)

25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, programming exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

**PART A:** Short answer questions

All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

**PART B:** Descriptive/Analytical/Problem solving questions

Candidates have to answer one question out of two or two questions out of four from each module.

Maximum Total Marks: 100
08.402   HUMANITIES  3 – 0 – 0  
(C R F T A H B)

Part I – Economics   (2 Periods per week)

Module I (13 hours)
Definition of Economics – Basic Concepts Goods – Choice of techniques – Production possibility curve
Primary – Secondary, Tertiary Sector – Significance of Money.
Meaning of Demand and Supply – Types of demand – Determinants of Demand – Demand forecasting
Production function – Law of Variable proportion – Returns to scale - Least cost combination of inputs – Cost
concepts – Cost output relationship.

Module II (13 hours)
Inflation – causes of inflation – measures to control inflation – Demand – Pull inflation – cost push inflation
– effects of Inflation – effects of inflations comparison between inflation and deflation.
of Keynesian Theory to UDC’S.
Stock Market and present scenario – Industrial sector past and present – Industry Analysis – Electronics –
Chemical – Automobile – FMCG Industry.
Environment and Development – Basic Issues – Sustainable Development and Environmental Accounting –
Population – Resources and the Environment – Poverty and the Environment – Growth versus the

Part II – Accountancy   (1 Period per week)

Module III (13 hours)
Book- Keeping and Accountancy -Elements of Double Entry -Book- Keeping-rules for journalising -Ledger
accounts –Cash book-Banking transactions – Trial Balance- Method of Balancing accounts- the journal
proper (simple problems).
Final accounts: Preparation of trading and profit and loss Account- Balance sheet (with simple problems) -
Introduction to Accounting packages (Description only)

Reference Books:

Part I
1. Modern Economic theory – K.K Dewett
2. Economic Development – Michael Todaro, Addison Wesley Longman Ltd.

Part II
1. Double Entry Book-Keeping – Batliboi
### Internal Continuous Assessment (Maximum Marks-50)

Marks shall be awarded for Part I and Par II in the ratio 70:30, respectively

- **25 Marks** - Tests (minimum 2)
- **15 Marks** - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, programming exercises, etc.
- **10 Marks** - Regularity in the class

### University Examination Pattern

Part I and Part II to be answered in separate answer books.

**Part – I  Economics**

**PART A: Short answer questions**

10 x 3 marks = 30 marks

All questions are compulsory. There should be at least four questions from each module and not more than six questions from any module.

**PART B: Descriptive/Analytical/Problem solving questions**

2 x 20 marks = 40 marks

Candidates have to answer one question out of two or two questions out of four from each module.

**Part II  Accountancy**

**Descriptive/Analytical/Problem solving questions**

2 x 15 marks = 30 marks

Candidates have to answer two questions out of three questions.

Maximum Total Marks: 100
08.403 COMPUTER HARDWARE DESIGN  2 – 1 – 0

Module I (13 hours)
Arithmetic algorithms: Algorithms for addition and subtraction of binary and BCD number – algorithms for multiplication and division of binary and BCD numbers – array multiplier – booth’s multiplication algorithm – restoring and nonrestoring division – algorithms for floating point addition, subtraction, multiplication and division.

Module II (13 hours)
Processor Logic Design: Register transfer logic – interregister transfer – arithmetic, logic and shift microoperations – conditional control statements – processor organization – design of arithmetic unit, logic unit, arithmetic logic unit and shifter – status register – processor unit – design of accumulator.

Module III (13 hours)

Text Books:
1. Digital Logic and Computer Design – M. Morris Mano, PHI.
2. Computer System Architecture – M. Morris Mano, PHI.

Reference Books:

Internal Continuous Assessment (Maximum Marks-50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software/hardware/simulation exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A: Short answer questions 10 x 4 marks=40 marks
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

PART B: Descriptive/Analytical/Problem solving questions 3 x 20 marks=60 marks
Candidates have to answer one question out of two or two questions out of four from each module.

Maximum Total Marks: 100
08.404 OBJECT ORIENTED TECHNIQUES (R F) 2 – 1 – 0

Module I (10 hours)
Fundamentals of object-oriented Design: Data Abstraction, Encapsulation, classes, Inheritance and Polymorphism, class Hierarchies. Designing an object-oriented system: Identifying the classes, Assigning Attributes and Behaviour, finding relationship between classes, Arranging classes into hierarchies: A design example. A first look at C++: Using streams for input and output. C++ enhancements to C: Default Function Arguments, Placement of variable declarations, the scope resolution operation, the “const” Qualifier, overloaded functions. References: References as Aliases, references and pointers similarities and differences, references as function parameters, references as return values.

Module II (13 hours)
Introduction to classes: Declaring and using classes, class members, creation and destruction of objects, accessing data members, returning a reference, “const” objects and member function. Classes and dynamic memory allocation: New, delete operators, “this” pointer. Static members, friends, array of class objects.

Module III (16 hours)
Inheritance and polymorphism: Derived class and base class, derived class constructors, overriding member functions, public and private inheritance, virtual functions, polymorphism, multiple inheritance, classes within classes. Operator overloading: Overloading unary operator, overloading binary operator, data conversion. Generic functions, generic classes. File processing – formatted – unformatted and random files. Microsoft foundation classes: Strings, data structure. Representing classes and attributes using UML.

Text Books:
2. Schaum’s outline of programming with C++ – J.R. Hubbard.
3. C++ Programming from problem analysis to program design 3rd Edn. – D.S. Malik, Thomson Publications

Reference Books:
2. Object Oriented Programming in Microsoft C++ – Balagurusamy.
3. Object Oriented Programming – Barkakti
4. Fundamentals of data structures in C++ – E. Horwitz, S. Sahni and D. Mehta, Universities Press (India)
5. Fundamentals of object oriented design in UML, 4th impression 2008 – Meilir P. Jones, Pearson Education (Chapter 4 – for UML part in Module III)

Internal Continuous Assessment (Maximum Marks-50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, programming exercises in C++, etc.
10 Marks - Regularity in the class

University Examination Pattern
PART A: Short answer questions
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

PART B: Descriptive/Analytical/Problem solving questions
Candidates have to answer one question out of two or two questions out of four from each module.

Maximum Total Marks: 100
Module I (14 hours)
Introduction to programming methodologies – structured approach, stepwise refinement techniques, programming style, documentation – analysis of algorithms: frequency count. Study of basic data structures – vectors, arrays, records, stacks, queues and dqueues.

Module II (19 hours)

Module III (19 hours)

Text Books:
1. Introduction to data structures with applications – Tremblay and Sorensons, TMH.
3. Classic data structures – D. Samanta, PHI

Reference Books:
1. Theory and problems of data structures – Seymour Lipschuts, Schaum’s series.
4. Fundamentals of data structures in C – E. Horwitz, S. Sahni and S. Anderson-Freed, Universities Press (India)

Internal Continuous Assessment (Maximum Marks-50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, programming exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A: Short answer questions
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

PART B: Descriptive/Analytical/Problem solving questions
Candidates have to answer one question out of two or two questions out of four from each module.

Maximum Total Marks: 100
Module I (15 hours)

**Introduction:** Basic concepts – terminology. Historical perspective - early system - simple monitor - performance - types of OS - batch processing - multiprogramming - time sharing - real time system - different classes of computers - functions and components of an operating system - OS structure - Multiprocessor system - distributed system. Operating system services.

**Information management:** File concepts file support - file system - directory structure - gaining access to files - basic file system calls - sharing and security - operation on files - file protection - allocation methods - implementation issues - case study.

Module II (18 hours)

**Memory management:** Preliminaries - Memory architecture evolution - Resident monitor - Swapping - fixed partitions - variable partitions - paging - segmentation - combined system - virtual memory concepts - overlay - demand paging - page replacement - space allocation policies - segmented paging - dynamic linking - caching of secondary storage information.

Module III (19 hours)

**Device management:** Physical characteristics – FCFS, SSF, C–SCAN - selecting a disk scheduling algorithm - sector queuing. I/O scheduling policies - terminal I/O handling - channels and control units - virtual devices. **Dead locks:** Dead lock problem - characteristics - prevention - avoidance - detection - Recovery from dead lock - combined approach to dead lock handling. **Protection:** Goals of protection - Mechanisms and policies - domain of protection - access matrix and its implementation. Dynamic protection structures, Language based protection - security.

**Text Books:**
1. Operating system concepts – J.L. Peterson and A. Silberschats, Addison Wesley.
2. An introduction to operating systems concepts and practice – P.C.P. Bhatt, PHI.

**Reference Books:**
1. Operating System Principle – P. Brinch Hanson, Prentice Hall of India.
2. The Logical design of operating systems – A.C. Shaw, Prentice Hall
3. Operating system principles – H.M. Deite, Addison-Wesley

**Internal Continuous Assessment (Maximum Marks-50)**

- 25 Marks - Tests (minimum 2)
- 15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, programming exercises, etc.
- 10 Marks - Regularity in the class

**University Examination Pattern**

**PART A:** Short answer questions

All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

**PART B:** Descriptive/Analytical/Problem solving questions

Candidates have to answer one question out of two or two questions out of four from each module.

Maximum Total Marks: 100
08.407 DATA STRUCTURES LAB (R F) 0 – 0 – 4
Programming exercises in C based on the course 08.405 Data Structures and Algorithms.
The exercises may include the following:-

1. Representation of sparse matrix – addition, multiplication and transpose of sparse matrices
2. Use of multidimensional arrays and structures
3. Linked list – singly linked list, circular linked list, and doubly connected linked list and application problems
4. String manipulation applications. Representation of polynomials, arithmetic operations on polynomials
5. Implementation of stacks using arrays and linked lists. Application problems using stacks – Maze problem, conversion between infix, postfix and prefix, expression evaluation etc.
6. Implementation of multiple stacks
7. Implementation of Queues using linked list and array – multiple Queues, Dqueues, priority queue and applications of queues
8. Creation and traversals of binary trees – counting nodes, finding height etc.
9. Creation of binary search tree – searching an item, insertion and deletion of nodes etc.
10. Implementation of sorting and searching algorithms

General instructions:
- Evaluation is a serious process that is to be conducted under the equal responsibility of both the internal and external examiners.
- The number of candidates evaluated per day should not exceed 20
08.408  DIGITAL SYSTEM LAB  0 – 0 – 4

1. Realization of Logic Circuits using basic gates.
2. Arithmetic circuits – Half adder, Full Adder circuits using gates
4. Shift Registers, ring counters, and Johnson counter using gates and ICs
6. Counter ICs, Sequence generator.
7. Four bit magnitude comparator, 4 bit Adder/Subtractor, BCD Adder using ICs.
8. BCD to Decimal and BCD to 7 segment decoder & display.
9. Multiplexers/ Demultiplexers using gates and ICs.
10. Realization of combinational circuits using multiplexer/demultiplexer ICs
11. Astable and monostable multivibrators using gates and ICs.
12. Study of ROM, RAM.

Optional experiments (to help the students to enhance their knowledge in the subject – can be carried out at the discretion of the institute, not compulsory).

1. – Introduction to VHDL and simulation of 2/3 simple experiments from the above list using VHDL
2. – Introduction to PC interface and implement an interface experiment with gates – AND, OR, NAND, NOR. It involves programming (preferably in C) to provide control signals from the parallel port to the inputs of the logic gates. The output of the gate will be displayed with an LED.

General instructions:
- Evaluation is a serious process that is to be conducted under the equal responsibility of both the internal and external examiners.
- The number of candidates evaluated per day should not exceed 20
Module I (18 hours)
Discrete and continuous random variables and their probability distributions - Probability distribution (density) functions - Distribution functions - Mean and Variance - Simple problems. - Binomial, Poisson, uniform and exponential distributions - Mean and Variance of the above distributions - Normal distribution - Properties of normal distribution - Computing probabilities using Binomial, Poisson, uniform, exponential and normal distributions

Module II (16 hours)
Curve fitting - Principle of least squares - Fitting a straight line - Fitting a parabola - Linear correlation and regression - Karl Pearson’s coefficient of correlation - Sampling distributions - Standard error - Estimation - Interval estimation of population mean and proportions (small and large samples) - Testing of Hypothesis - Hypothesis concerning a mean, Equality of means-Hypothesis concerning one proportion, difference of two proportions.

Module III (18 hours)
Joint probability density function - Properties - Marginal and conditional distribution - Independence - Random processes - Classification of random processes - Examples - Average values such as mean, autocorrelation, auto covariance, correlation coefficient of random processes - stationarity - strict sense stationary process - wide sense stationary process - Autocorrelation function and its properties - Power spectral density and its properties (no proof) - Related problems - Markov chains. Transition probability matrices - Chapman-Kolmogorov equation (no proof) - Poisson process - Mean and autocorrelation of Poisson process - Related problems

Reference Books
1. Probability, random variable and stochastic processes – Papoulis and S.U. Pillai, 4/e, TMH
2. Probability and Random Processes – Veerarajan, 2/e, TMH
3. Probability and Random processes with application to signal processing – Stark and Woods, 3/e, Pearson Education

Internal Continuous Assessment (Maximum Marks-50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A: Short answer questions
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

PART B: Descriptive/Analytical/Problem solving questions
Candidates have to answer one question out of two or two questions out of four from each module.

Maximum Total Marks: 100
**08.502 ADVANCED MATHEMATICS AND QUEUING MODELS (R F) 3 – 1 – 0**

**Module I (18 hours)**

**Module II (16 hours)**
Partitioned matrices and matrix factorization - LU decompositions - Vector space and subspace - Null space and Column spaces - Bases - Co-ordinate systems - Dimension of vector space - Rank - Change of basis - Inner product space - Length and orthogonality - Orthogonal sets - Orthogonal projection - Gram-Schmidt process - Least square problem - Quadratic form - Constrained optimization of quadratic forms - Singular value decomposition (proof of theorem not included)

**Module III (18 hours)**
Queuing Theory- Queues-Characteristics of Queues-Kendal’s notation-Random arrivals-Arrival and Departure Distributions-Types of Queue- Basic Queuing models- M/M/1:∞/FIFO - P_n=ρ^nP_0 (no proof)-Derivation of the following Characteristics
(a) Probability that queue size ≥ n (b) Average number of customers in the system – Average length of the waiting line – Waiting time distribution (no proof) – Waiting time in the system – Waiting time in the queue - Little’s Formulae – Problems based on the above results.
M/M/1:N/FIFO model – Formulae (without proof) for the average number of units in the system and in the queue and the average waiting time – Problems.
M/M/c:∞/FIFO model – Standard results ( no derivation) - Problems

**Reference Books**

08.504 SYSTEMS PROGRAMMING (R F) 2 – 1 – 0

Module I (13 hours)
Systems Programming – What is systems programming, Difference between systems programming and application programming – Dependence on systems programming on hardware – System software and Machine architecture. SIC & SIC/XE Architecture and Programming. Traditional (CISC) machines – VAX architecture, Pentium Pro architecture, RISC machine – Ultra SPARK, Power PC.

Module II (13 hours)
Loaders and Linkers basic loader functions, machine dependent loader features, machine independent loader features, loader design options – linkage editors, dynamic linkage editors, dynamic linking, bootstrap loaders, examples – DOS linker.

Module III (13 hours)
Text Editors – overview of the editing process – user interface, editor structure. Debuggers – debugging functions and capabilities, relationship with other parts of the system – user interface criteria.

Text Books:

Reference Books:

Internal Continuous Assessment (Maximum Marks-50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A: Short answer questions
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

PART B: Descriptive/Analytical/Problem solving questions
Candidates have to answer one question out of two or two questions out of four from each module.

Maximum Total Marks: 100
08.505 MICROPROCESSORS AND INTERFACING  2 – 2 – 0

Module I (16 hours)

Module II (18 hours)
Intel 8086 Microprocessor – Internal architecture, Signals and System connections, addressing modes, Minimum mode and Maximum mode- system timing, Comparison with 8088, Instruction set and programming. Assembler directives, Interrupts and interrupt applications, 8259A Priority Interrupt controller.

Module III (18 hours)
Interfacing 8086- 8254 software programmable timer/counter, 8237 DMA controller, Digital interfacing – 8255 Programmable Peripheral Interface, display and key board interfacing with 8279, 8251A USART.

Text Books:
1. Interfacing & applications of Microprocessors – Gaonkar, Prentice Hall

Reference Books:
1. Microprocessors, PC Hardware and Interfacing – N Mathivanan, PHI Learning Pvt. Ltd.

Internal Continuous Assessment (Maximum Marks-50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software/hardware exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A:  Short answer questions
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

PART B:  Descriptive/Analytical/Problem solving questions
Candidates have to answer one question out of two or two questions out of four from each module.

Maximum Total Marks: 100
08.506 OBJECT ORIENTED DESIGN AND JAVA PROGRAMMING  2 – 1 – 0

Module I (15 hours)

Module II (11 hours)

Module III (13 hours)

Text Books:

Reference Books:
2. Object Oriented Analysis and Design with Applications, 2nd Edn – Grady Booch, Pearson Education
3. Object Oriented Modeling and Design with UML, 2nd Edn – Blaha, Rumbaugh, Pearson Education
4. Head First Java, 2nd Edn – Kathy Sierra, O'Reilly
5. Programming JAVA a Primer – E. Balagurusamy, TMH

Internal Continuous Assessment (Maximum Marks: 50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A:  Short answer questions
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

PART B:  Descriptive/Analytical/Problem solving questions
Candidates have to answer one question out of two or two questions out of four from each module.

Maximum Total Marks: 100
08.507 OBJECT ORIENTED PROGRAMMING LAB  0 – 0 – 4

Programming exercises based on the courses 08.404 Object Oriented Techniques. The exercises may include the following:-

1. Programs Using Functions
   - Functions with default arguments
   - Implementation of Call by Value, Call by Address and Call by Reference
2. Simple Classes for understanding objects, member functions and Constructors
   - Classes with primitive data members
   - Classes with arrays as data members
   - Classes with pointers as data members – String Class
   - Classes with constant data members
   - Classes with static member functions
3. Compile time Polymorphism
   - Operator Overloading including Unary and Binary Operators.
   - Function Overloading
4. Runtime Polymorphism
   - Inheritance
   - Virtual functions
   - Virtual Base Classes
   - Templates
5. File Handling
   - Sequential access
   - Random access

</tbody>
</table>
Programming exercises based on the courses 08.503 Data Base Design and 08.506 Object Oriented Design and JAVA Programming will be covered in this subject. The exercises may include the following so that the students get trained in (i) Practicing database commands (ii) Developing GUI based application using database.

1. Familiarization of creation of databases, SQL commands (DDL, DML & DCL) and group functions to access data from the database. Suitable exercises to practice SQL commands in the above category may be given.

2. Write SQL procedure for an application using exception handling.

3. Write SQL procedure for an application using cursors.

4. Write a DBMS program to prepare reports for an application using function.

5. Write SQL block containing triggers and stored procedures.

6. Develop a menu driven, GUI based user friendly database application in any one of the domains such as Banking, Electricity Billing, Library management, Payroll, Insurance, Inventory, Health care etc. integrating all the features specified in the above exercises.

A report containing analysis and design for the above database application should be included in the laboratory record immediately after the write up for the programming exercises 1 through 5. The principles learned from 08.506 Object Oriented Design and JAVA Programming may be used for creating the above report. To prepare the report, the students may follow the guidelines given in APPENDIX (R).

Optional Exercises:
A web based database application may be given as an additional exercise in any of the relevant domain.

Internal Continuous Assessment (Maximum Marks-50)

University Examination Pattern (Maximum marks – 100)

A complete GUI based database application incorporating one/more features listed in the exercises above will be used to test the students’ knowledge in the topic. Students have to demonstrate the database application softwares developed by them (the 6th exercise) as part of the viva voce.

Marks should be awarded as follows:

<table>
<thead>
<tr>
<th>Marks</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>30</td>
<td>Viva voce (30% weightage should be given to Exercise No. 6).</td>
</tr>
<tr>

<td>Implementing the work/Conducting the experiment.</td>
</tr>
<tr>
<td>25</td>
<td>Output/Results and inference.</td>
</tr>
</tbody>
</table>

General instructions:
- Evaluation is a serious process that is to be conducted under the equal responsibility of both the internal and external examiners.
- The number of candidates evaluated per day should not exceed 20
Module I (18 hours)

Module II (18 hours)
Compile time error handling, error detection, reporting, recovery and repair. Basic parsing techniques – Top down parsing – recursive descent parser, predictive parser simple LL(1) grammar. Bottom up parsers, operator precedence parser, LR grammar, LR(0), SLR(1), LALR(1) parsers.

Module III (16 hours)
Syntax directed translation schemes, intermediate codes, translation of assignments, translation of array reference, Boolean expressions, case statements, back patching, code optimization, loop optimization and global optimization, sources of sample code generation.

Text books:
2. Compiler Design – Santanu Chattopadhyaya, PHI

Reference Books
1. Engineering a Compiler, 2nd Edn – Keith D Cooper and Linda Torczon, Elsevier
5. Principles of Compiler design – V. Raghavan, TMH

Internal Continuous Assessment (Maximum Marks-50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A: Short answer questions
10 x 4 marks=40 marks
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

PART B: Descriptive/Analytical/Problem solving questions
3 x 20 marks=60 marks
Candidates have to answer one question out of two or two questions out of four from each module

Maximum Total Marks: 100
08.602 PRINCIPLES OF PROGRAMMING LANGUAGES 2 – 1 – 0

Module I (13 hours)
Names, Scopes, and Bindings: Names and Scopes, Binding Time, Scope Rules, Storage Management, Aliases, Overloading, Polymorphism, Binding of Referencing Environments.
Data Types: Type Systems, Type Checking, Records and Variants, Arrays, Strings, Sets, Pointers and Recursive Types, Lists, Files and Input/Output, Equality Testing and Assignment.

Module II (13 hours)
Subroutines and Control Abstraction: Static and Dynamic Links, Calling Sequences, Parameter Passing, Generic Subroutines and Modules, Exception Handling, Coroutines.
Data Abstraction and Object Orientation: Encapsulation, Inheritance, Constructors and Destructors, Dynamic Method Binding, Multiple Inheritance.

Module III (13 hours)
Innovative features of Scripting Languages: Scoping rules, String and Pattern Manipulation, Data Types, Object Orientation.
Concurrency: Threads, Synchronization, Language-Level Mechanisms.
Run-time program Management: Virtual Machines, Late Binding of Machine Code, Reflection, Symbolic Debugging, Performance Analysis.

Text Books:

Reference Books:

Internal Continuous Assessment (Maximum Marks-50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern
PART A: Short answer questions
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

PART B: Descriptive/Analytical/Problem solving questions
Candidates have to answer one question out of two or two questions out of four from each module

Maximum Total Marks: 100
08.603 FORMAL LANGUAGES AND AUTOMATA THEORY 3 – 1 – 0

Module I (18 hours)
Introduction to theory of computation, Finite state automata – description of finite automata, Properties of transition functions, Designing finite automata, NFA, 2 way finite automata, equivalence of NFA and DFA, Mealy and Moor machine, finite automata with epsilon moves, Regular sets and regular grammars, regular expressions, pumping lemma for regular languages, closure properties of regular sets and regular grammars, Application of finite automata, Decision algorithms for regular sets, Minimization of FSA.

Module II (16 hours)
Chomsky classification of languages, CFGs, Derivation trees, ambiguity, simplification of CFLs, normal forms of CFGs, pumping lemma for CFGs, decision algorithms for CFGs, designing CFGs, PDA – formal definition, examples of PDA, equivalence with CFGs, PDA and CFG, Chomsky hierarchy.

Module III (18 hours)
Turing machines basics and formal definition, Language acceptability by TM, examples of TM, variants of TMs – multitaape TM, NDTM, Universal Turing Machine, offline TMs, Equivalence of single tape and multitaape TMs, recursive and recursively enumerable languages, decidable and undecidable problems – examples, halting problem, reducibility.

Text Books:
1. Introduction to automata theory, languages and computation – J.E. Hopcroft, R. Motwani and J.D. Ullman, Addison Wesley

Reference Books:
1. Introduction to the Theory of Computation, 2nd Edn – Michael Sipser, Thomson Publishing
3. Introduction to automata theory and formal languages – Peter Linz, Narosa Publishing

Internal Continuous Assessment (Maximum Marks-50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A: Short answer questions
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

PART B: Descriptive/Analytical/Problem solving questions
Candidates have to answer one question out of two or two questions out of four from each module

Maximum Total Marks: 100
Module I (13 hours)

Module II (13 hours)

Module III (13 hours)

Text Books:
1. Introduction to Signals and Systems and Digital Signal Processing – M.N. Bandyopadhyaya, PHI
2. Digital Signal Processing – S.D. Apte, Wiley India
3. Digital Signal Processing, Fundamentals and Applications – Li Tan, Elsevier

Reference Books:
4. Introduction to Digital Signal Processing – J.K. Proakis and D.G. Manolakis, MacMillan
6. Digital Signal Processing : A Practical Guide for Engineers and Scientists – S.W.Smith, Elsevier India

Internal Continuous Assessment (Maximum Marks-50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern
PART A: Short answer questions
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

PART B: Descriptive/Analytical/Problem solving questions
Candidates have to answer one question out of two or two questions out of four from each module.

Maximum Total Marks: 100
08.605 HIGH PERFORMANCE MICROPROCESSORS 3 – 1 – 0

Module I (18 hours)
Intel 80286, 80386 and 80486 microprocessors- System architecture, Modes- Real mode- Protected mode - Virtual 8086 mode, Segmentation and Paging, Protection schemes, Management of task, Enhanced instructions, Intel Pentium processor – System architecture-Branch prediction- Pentium memory management, Pentium Pro – Architecture and Special features, Pentium 4- Architecture-memory system-Hyper Threading Technology.

Module II (16 hours)
Reduced Instruction Set Computers (RISC)- Instruction execution characteristics, The use of a large register file, Compiler based Register optimization, Reduced Instruction Set Architecture, RISC Pipelining, MIPS R4000, SPARC, The ARM processors- ARM registers- ARM instructions- Memory access instructions and addressing modes, register move instructions, arithmetic and logic instructions and branch instructions (Programming not required) , CISC vs RISC.

Module III (18 hours)

Text Books:
5. The 8051 Microcontroller and Embedded Systems – Mohammed Ali Mazidi and Jancie Gillispie Mazidi, Pearson Education Asia (Module III)

Reference Books:
2. The Intel Microprocessors 8086/88, 80286,80386,80486,Pentium ,Pentium Pro, PentiumII, PentiumIII, Pentium 4 Architecture,Programming and interfacing – Barry.B.Brey, PHI.

Internal Continuous Assessment (Maximum Marks:50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A: Short answer questions
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

PART B: Descriptive/Analytical/Problem solving questions
Candidates have to answer one question out of two or two questions out of four from each module

10 x 4 marks=40 marks
3 x 20 marks=60 marks

Maximum Total Marks: 100
Module I (12 hours)
Communication model- Simplex, half duplex and full duplex transmission.

Module II (13 hours)
Sampling theorem - Encoding digital data into digital signal - NRZ, Biphase, Multilevel binary - Encoding digital data into analog signals - ASK, FSK, PSK - Encoding analog data into digital signals - PCM, PM, DM - Encoding analog data into analog signals - AM, FM, PM - Multiplexing - TDM, FDM, WDM & DWDM.

Module III (14 hours)
Basics of wireless communication- Introduction to WiFi, WiMax, GSM, GPRS

Text Books:
1. Data and Computer Communications, 8th Edn – William Stallings, PHI

Reference Books:
1. Computer Networks, 4th Edn – Andrew S Tanenbaum, PHI
2. Mobile communications, 2nd Edn – Jochen Schiller, Pearson Education

Internal Continuous Assessment (Maximum Marks-50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A: Short answer questions
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

10 x 4 marks=40 marks

Candidates have to answer one question out of two or two questions out of four from each module.

3 x 20 marks=60 marks

Maximum Total Marks: 100
08.607 MICROPROCESSOR LAB 0 – 0 – 4

1. Study of 8086 trainer kit by executing simple programs such as code conversion, decimal arithmetic and bit manipulation
2. Study of Assembler and Debugging commands
3. Programming with 8086 – Addition of 32 bit numbers, matrix multiplication, factorial, LCM, GCD, Fibonacci, String manipulation, search, find and replace, copy operations, sorting. (PC Required)
5. Interfacing 8086 with the following and conduct experiments:
   - 8255, 8279, 8259, and 8253/54.
   - Stepper Motor
   - ADC and DAC.
6. Parallel Communication between two Microprocessor Kits using Mode 1 and Mode 2 of 8255.
7. Interfacing Microprocessor kit with PC using RS 232

General instructions:
- Evaluation is a serious process that is to be conducted under the equal responsibility of both the internal and external examiners.
- The number of candidates evaluated per day should not exceed 20
03.608 SYSTEM SOFTWARE LAB 0 – 0 – 4

The exercises may include the following:

1. Design of a single pass assembler for a hypothetical Machine
2. Design of a 2-pass assembler for a hypothetical machine
3. Design of assembler which generates code with relocation option
4. Design of absolute loader
5. Design of relocating loader
6. Design of macro processor
7. Lexical analysis
8. Operator precedence relations
9. Recursive descent parser
10. First and follow
11. Intermediate code generation
12. Code generation

08.701 COMPUTER GRAPHICS 2 – 1 – 0

Module I (12 hours)

Module II (13 hours)
Two dimensional transformations – Homogeneous coordinate systems – matrix formulation and concatenation of transformations – Windowing concepts – two dimensional clipping. Introduction to graphics in three dimension – specification of a 3D view – 3D transformations

Module III (14 hours)

Text books:

Reference Books

Internal Continuous Assessment (Maximum Marks-50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A: Short answer questions 10 x 4 marks=40 marks
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

PART B: Descriptive/Analytical/Problem solving questions 3 x 20 marks=60 marks
Candidates have to answer one question out of two or two questions out of four from each module.

Maximum Total Marks: 100
Module I (12 hours)
Concepts in algorithm analysis – the efficiency of algorithms, average and worst – case analysis, Asymptotic notation, time and space complexity, Recurrences – substitution method, iteration method and master method, Analysis of sorting algorithms – insertion sorting, heaps, maintaining the heap property, building heap, heap sort algorithm, priority queues. Description of quick sort, randomised version of quick sort.

Module II (13 hours)

Module III (14 hours)

Text Books:
1. Introduction to Algorithms – Thomas H. Cormen, Charles E. Leiserson and Ronald L. Rivest, PHI.

Reference Books:
2. Introduction to the design and analysis of algorithms – A. Levitin, Pearson Education
3. Computer algorithms : Introduction to design and Analysis – Sara Baase, Allen Van Gelder, Addison Wesley

Internal Continuous Assessment (Maximum Marks: 50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A: Short answer questions
10 x 4 marks=40 marks

PART B: Descriptive/Analytical/Problem solving questions
3 x 20 marks=60 marks
Candidates have to answer one question out of two or two questions out of four from each module.

Maximum Total Marks: 100
Module I (12 hours)

Module II (13 hours)
MAC Sub layer – IEEE 802 FOR LANs & MANs, IEEE 802.3, 802.4, 802.5. Bridges - Switches - High Speed LANs - Gigabit Ethernet. Wireless LANs - 802.11 a/b/g/n, 802.15.
Network layer – Routing – Shortest path routing, Flooding, Distance Vector Routing, Link State Routing, RIP, OSPF, Routing for mobile hosts. Congestion control algorithms – QoS.

Module III (14 hours)
Transport Layer – TCP & UDP.
Application layer – DNS, Electronic mail, MIME, SNMP. Introduction to World Wide Web.
VoIP - H.323, SIP standards, Gatekeeper.

Text Books:
1. Computer Networks, 4th Edn – Andrew S Tanenbaum, PHI.

Reference Books:
1. Data and Computer Communications , 8th Edn. – William Stallings, PHI.

Internal Continuous Assessment (Maximum Marks:50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern
PART A: Short answer questions
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

PART B: Descriptive/Analytical/Problem solving questions
Candidates have to answer one question out of two or two questions out of four from each module.

Maximum Total Marks: 100
08.704 (1) COMPUTATIONAL GEOMETRY (ELECTIVE I) 3 – 1 – 0

Module I (17 hours)
Geometric Preliminaries, DCEL (Doubly Connected Edge List) data structure, Geometric Duality, Geometric Searching - Planar Straight Line Graph (PSLG), Point Location Problem, Location of a point in a planar subdivision, Plane Sweep Algorithm, Slab method, Chain method, Regularization of PSLG, Range Searching Problems.

Module II (17 hours)

Triangulation — Triangulation of a point set, Triangulation Algorithms, Polygon Triangulation, Convexity, Helly’s theorem, Delaunay Triangulation, Voronoi Diagrams - Applications in the plane, Post Office Problem.

Module III (18 hours)
Arrangements of Lines - Zone Theorem, Many Faces in arrangements, Constructing the arrangements, Forbidden graph theorem, Bipartite graph for many face problems.

Linear Programming - Linear Programming in Two Dimensions, Prune - Eliminate Redundant Half-Planes.

Introduction to Visibility Problems - Definition of direct visibility, Point visibility and Edge visibility, Algorithm for computing point-visible region inside a polygon.

Text Books:

Reference Books:

Internal Continuous Assessment (Maximum Marks-50)

25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as homework, problem solving, literature survey, seminar, term-project, software exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A: Short answer questions 10 x 4 marks=40 marks

All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

PART B: Descriptive/Analytical/Problem solving questions 3 x 20 marks=60 marks

Candidates have to answer one question out of two or two questions out of four from each module.

Maximum Total Marks: 100
08.704 (2) MULTIMEDIA SYSTEMS AND DATA COMPRESSION (ELECTIVE I) 3 – 1 – 0

Module I (17 hours)

Module II (17 hours)

Module III (18 hours)

Text Books:
1. Multimedia Communications – Fred Halsall, Pearson Education

Reference Books:

Internal Continuous Assessment (Maximum Marks-50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A: Short answer questions
10 x 4 marks=40 marks
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

PART B: Descriptive/Analytical/Problem solving questions
3 x 20 marks=60 marks
Candidates have to answer one question out of two or two questions out of four from each module.

Maximum Total Marks: 100
Module I (20 hours)
Listening, Reading, Speaking and Writing skills.
Listening Skills: Listening for general content- Intensive listening-Listening for specific information.
Speaking Skills: Oral practice-Describing objects/situations/people-Role play-Just A Minute/Group Discussion- informal letters-essentials of telephonic conversation-invitations-minutes of a meeting.
Reading Skills: Skimming the text- exposure to a variety of technical articles, essays, graphic representation, and journalistic articles.
Writing Skills: Skills to express ideas in sentences, use of appropriate vocabulary -sentence construction-paragraphs development-note making-editing a passage and essay writing.

Basics of Technical Communication.
Technical communication- features, Distinction between general and technical communication- language as a tool of communication- levels of communication-interpersonal, organizational, mass communication-the flow of communication: upward, downward and lateral-importance of technical communication- barriers to communication.

Module II (20 hours)
Forms of Technical communication.

Module III (12 hours)
A non-detailed study of the autobiography: “Wings of Fire-an autobiography by APJ Abdul Kalam”.
Students should read the book on their own and selected topics may be discussed in the class.

Reference Books:
1. Basic Communication Skills for Technology – Andrea J Rutherford, Pearson Education.
2. Business Correspondence and Report Writing – Mohan K and Sharma R C, TMH.
4. Everyday Dialogues in English – Robert J Dixson, PHI.

Internal Continuous Assessment (Maximum Marks:50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

Module I Short answer questions
Six questions to be answered out of eight questions. Questions to be limited to the topics Writing Skills and Basics of Technical Communication.

Module II Descriptive questions
Two questions to be answered out of four questions.

Module III Essay Questions
Two questions to be answered out of four questions

Maximum Total Marks: 100
08.704 (4) PATTERN RECOGNITION AND SCENE ANALYSIS (ELECTIVE I) 3 – 1 – 0

Module I (16 hours)

Module II (18 hours)

Module III (18 hours)

Text Books:
1. Pattern Recognition and Image analysis – E. Gose, R. Johnsonbaugh, S. Jost, , PHI

Reference Books:
4. Pattern Recognition, 3rd Edn – S. Theodoridis, K. Koutroumbas, Elsevier

Internal Continuous Assessment (Maximum Marks-50)

25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A: Short answer questions

All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

10 x 4 marks=40 marks

PART B: Descriptive/Analytical/Problem solving questions

Candidates have to answer one question out of two or two questions out of four from each module.

3 x 20 marks=60 marks

Maximum Total Marks: 100
### Module I (18 hours)
*Open loop and closed loop control systems:* Transfer function – Poles and zeros – Transfer function of linear systems – Simple electrical, mechanical, and electromechanical systems – Block diagram representation – Block diagram reduction – Signal flow graph – Mason’s gain formula.

### Module II (18 hours)

### Module III (16 hours)

**Text Books:**

**Reference Books:**

**Internal Continuous Assessment (Maximum Marks-50)**
- 25 Marks - Tests (minimum 2)
- 15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software exercises, etc.
- 10 Marks - Regularity in the class

**University Examination Pattern**

**PART A: Short answer questions**

All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

**PART B: Descriptive/Analytical/Problem solving questions**

Candidates have to answer one question out of two or two questions out of four from each module

*Maximum Total Marks: 100*
08.705 (1) ADVANCED DATABASE MANAGEMENT SYSTEM (ELECTIVE II) 3 – 1 – 0

Module I (17 hours)
Overview of relational database concepts- distributed DBMS – concepts and design- functions and architecture of DDBMS- distributed relational database design- transparencies in DDBMS- distributed transaction management- concurrency control deadlock management- distributed database recovery-replication servers- query optimization- mobile database

Module II (17 hours)
Object DBMS- weaknesses of RDBMS- object oriented concepts- storing objects in relational database- OODBMS concepts and design – perspectives- persistence- issues in OODBMS- advantages and disadvantages- object group- object database standard – object store object-relational database examples

Module III (18 hours)
Web technology and DBMS- web as application platform – data warehousing concepts – data warehouse architecture- online analytical processing – OLAP benchmarks, applications, benefits and tools – introduction to data mining

Text Books:
1. Database systems, a practical approach to design implementation and management – Thomas Connolly and Caroly Begg, Pearson Education

Reference Books:
1. Fundamentals of database systems – Elmasri and Navathe, Addison Wesley
2. Object oriented interfaces and databases – Rajesh Narang, PHI
3. Object oriented database systems: approaches and architectures – C S R Prabhu, PHI
4. Database management systems – R Panneerselvam, PHI
5. Data Warehousing – C S R Prabhu, PHI

Internal Continuous Assessment (Maximum Marks-50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A: Short answer questions
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

PART B: Descriptive/Analytical/Problem solving questions
Candidates have to answer one question out of two or two questions out of four from each module.

Maximum Total Marks: 100
08.705 (2) COMPUTER HARDWARE AND INTERFACING (ELECTIVE II) 3 – 1 – 0

Module I (17 hours)
CPU Essentials – Modern CPU concepts, Architectural performance features, CPU over clocking – over clocking requirements, over clocking the system.
Memory – How memory works, Memory chips and modules – DIPP, SIPP, SIMM, DIMM, SO-DIMM, RIMM. Memory types, Advanced memory technologies – RDRAM, DDRAM, PPRAM.
Motherboard – Motherboard Controllers and System Resources – Memory address conflicts and memory map, IRQ, Chipsets – Northbridge, Southbridge, Functions of Chipset. ROM BIOS, ROM POST. CMOS Setup.

Module II (17 hours)
Optical Storage Devices – Optical storage media, CD ROM drives. CD-RW. DVD ROM drives – DVD drive and decoder.

Module III (18 hours)

Text Books:

Reference Books:
1. Microprocessors, PC Hardware and Interfacing – N. Mathivanan, PHI.
3. The complete PC Upgrade and Maintenance Guide – Mark Minasi, Wiley India
4. Upgrading and Repairing PCs – Scott Mueller, Pearson Education.
5. The Indispensable PC Hardware Book – Hans-Peter Messmer, Addison-Wesley

Internal Continuous Assessment (Maximum Marks-50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A: Short answer questions
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

PART B: Descriptive/Analytical/Problem solving questions
Candidates have to answer one question out of two or two questions out of four from each module.

Maximum Total Marks: 100
Module I (18 hours)

Module II (16 hours)

Module III (18 hours)

Text Books:

Reference Books:
4. Artificial Neural networks – B. Yegnanarayana, PHI

Internal Continuous Assessment (Maximum Marks-50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A: Short answer questions
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.
10 x 4 marks=40 marks

PART B: Descriptive/Analytical/Problem solving questions
Candidates have to answer one question out of two or two questions out of four from each module
3 x 20 marks=60 marks

Maximum Total Marks: 100
08.705 (4)  DATA MINING TECHNIQUES (ELECTIVE II)  3 – 1 – 0
(Common with  F 08.706C)

Module I (17 hours)
Fundamentals of data mining - Basic data mining tasks, Issues, DM versus KDD Data preprocessing-
Aggregation, Sampling, Dimensionality reduction, Feature subset selection, Feature creation, Discretization
and Binarization, Variable transformation Data warehousing and OLAP Technology – Introduction to Data
warehouse, Multidimensional data model, Data warehouse architecture and implementation, Data
warehousing and data mining, System architecture.

Module II (17 hours)
Association and Correlation - Basic algorithms, Advanced association rule techniques, Measuring the quality
rules, From association mining to correlation analysis, Constraint based association mining
Association and Prediction - Classification and prediction, Issues, Algorithms-Decision tree-based, statistical-
based, Distance-based, Nueral network and rule-based. Support vector machines, Other classification
methods, Prediction, Accuracy and Error measures, Evaluation of accuracy of classifier or predictor,
Increasing the accuracy, model selection.

Module III (18 hours)
Cluster analysis – Types of data in cluster analysis, classification of major clustering methods. Partitional
algorithms - Hierarchical methods, Density based methods, Grid based methods, Model based clustering
methods. Clustering large data bases, Constraint based cluster analysis
Advanced Topics - Multidimensional analysis and descriptive mining of complex data objects, Spatial mining,
Multimedia mining, Text mining, Web mining, Temporal mining.

Text Books:
1. Data Mining: Concepts and Techniques – Jiawei Han and Micheline Kamber, Morgan Kaufmann Publishers
2. Data Mining: Introductory and Advanced Topics – Margaret H.Dunham and S.Sridhar, Pearson Education

Reference Books:
2. Data mining techniques – Arun K Pujari, Universities Press
3. Data Warehousing, Data Mining and OLAP – A. Berson and S.J. Smith, TMH
4. Data Mining Methods and Models – D.T. Larose, Wiley

Internal Continuous Assessment (Maximum Marks: 50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar,
term-project, software exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A: Short answer questions
All questions are compulsory. There should be at least three questions
from each module and not more than four questions from any module.

PART B: Descriptive/Analytical/Problem solving questions
Candidates have to answer one question out of two or two questions
out of four from each module

10 x 4 marks=40 marks
3 x 20 marks=60 marks

Maximum Total Marks: 100
08.705 (5)  C# AND .NET FRAMEWORK  (ELECTIVE II)  3 – 1 – 0

Module I (17 hours)
Introduction To C#: Introducing C#, Understanding .NET, Overview of C#, Literals, Variables, Data Types, Operators, Expressions, Branching, Looping, Methods, Arrays, Strings, Structures, Enumerations.
Object Oriented Aspects Of C#: Classes, Objects, Inheritance, Polymorphism, Interfaces, Operator Overloading, Delegates, Events, Errors and Exceptions.

Module II (17 hours)
Application Development On .NET: Building Windows Applications, Accessing Data with ADO.NET.

Module III (18 hours)
The CLR And The .NET Framework: Assemblies, Versioning, Attributes, Reflection, Viewing MetaData, Type Discovery, Reflecting on a Type, Marshaling, Remoting, Understanding Server Object Types, Specifying a Server with an Interface, Building a Server, Building the Client, Using Single Call, Threads.

Text Books:

Reference Books:

Internal Continuous Assessment (Maximum Marks-50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A: Short answer questions
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module. 10 x 4 marks=40 marks

PART B: Descriptive/Analytical/Problem solving questions
Candidates have to answer one question out of two or two questions out of four from each module. 3 x 20 marks=60 marks

Maximum Total Marks: 100
08.706 COMPUTER HARDWARE AND INTERFACING LAB  

The exercises may include the following. Programs are to be developed preferably in C language. The ALP may also be used.

1. Familiarization of the components / Cards inside a computer, standard connectors, cords, different ports, various computer peripherals, NIC and other I/O cards, and their uses.

2. Assembling of PC from Components.

3. Interfacing with parallel ports:-
   - Interfacing LEDs, 7 segment display devices, relays, sensors etc.
   - Testing of simple logic gates using parallel port.
   - Data transfer to the printer by direct access of parallel port registers
   - Inputting external data using the unidirectional/bidirectional parallel port.
   - Controlling a stepper motor using parallel port.
   - Interfacing ADC and DAC to parallel port.
   - PC to PC data transfer using parallel port.

4. Interfacing using serial ports:-
   - Finding the base addresses of COM ports in a system.
   - Data acquisition through COM port using ADC chip.
   - Serial communication between two computers using BIOS serial port services

5. 8051 Micro controller experiments:-
   - Familiarization of 8051 trainer kit by executing simple Assembly Language programs such as Multi byte addition, searching, sorting, and code conversion
   - Interfacing experiments with 8051:-
     - Data transfer using serial port
     - LCD interfacing
     - Keyboard interfacing
     - Sensor interfacing

---

**Internal Continuous Assessment (Maximum Marks-50)**

<table>
<thead>
<tr>
<th>Marks</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>20</td>
<td>Tests (minimum 1)</td>
</tr>
<tr>
<td>20</td>
<td>Up-to-date lab work, problem solving capability, keeping track of rough record and fair record, term projects, assignment-software/hardware exercises, etc.</td>
</tr>
<tr>
<td>10</td>
<td>Regularity in the class</td>
</tr>
</tbody>
</table>

**University Examination Pattern (Maximum marks – 100)**

Marks should be awarded as follows:

<table>
<thead>
<tr>
<th>Marks</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>20</td>
<td>Algorithm/Design.</td>
</tr>
<tr>
<td>25</td>
<td>Viva voce.</td>

<tr>
<td>30</td>
<td>Implementing the work/Conducting the experiment.</td>
</tr>
<tr>
<td>25</td>
<td>Output/Results and inference.</td>
</tr>
</tbody>
</table>

**General instructions:**

- Evaluation is a serious process that is to be conducted under the equal responsibility of both the internal and external examiners.
- The number of candidates evaluated per day should not exceed 20
08.707 OPERATING SYSTEMS AND NETWORK PROGRAMMING LAB 0 – 0 – 4

1. Inter-process communication using mail boxes, pipes, message queues and shared memory
2. Implementation of dining philosophers problem by multiprogramming using threads, semaphores and shared memory
3. Implementation of bankers algorithm
4. Software simulation of Medium Access Control protocols – 1) Go Back N. 2) Selective Repeat and 3) Sliding Window
5. Implementation of a sub set of simple mail transfer protocol using UDP
6. Implementation of a sub set of a file transfer protocol using TCP/IP
7. Implementation of finger utility using remote procedure call (RPC)

Internal Continuous Assessment (Maximum Marks: 50)

- 20 Marks - Tests (minimum 1)
- 20 Marks - Up-to-date lab work, problem solving capability, keeping track of rough record and fair record, term projects, assignment-software exercises, etc.
- 10 Marks - Regularity in the class

University Examination Pattern (Maximum marks – 100)

Marks should be awarded as follows:

- 20 Marks - Algorithm/Design.
- 25 Marks - Viva voce.
- 30 marks - Implementing the work/Conducting the experiment.
- 25 Marks - Output/Results and inference.

General instructions:

- Evaluation is a serious process that is to be conducted under the equal responsibility of both the internal and external examiners.
- The number of candidates evaluated per day should not exceed 20
PROJECT DESIGN:

The project is aimed at improving the professional skill and competency of the students. The project is for a period of two semesters and students (not more than 4 members in a group) are expected to carry out a complete project. The titles of the projects and the guiding faculty members should be identified at the beginning of the seventh semester.

The design and development of the project may include hardware and/or software. The project is expected to be completed in the eighth semester. The seventh semester is mainly for the preliminary works of the project viz. design of the project, literature survey, collection of materials and fabrication methodology etc. An interim report is to be submitted by each student at the end of the seventh semester.

For the award of the sessional marks, the interim report and the students’ involvement in the preliminary works of the project shall be assessed by a panel consisting of the Head of the Department, project coordinator, project guide, and a senior faculty member. The Head of the Department shall be the chairman of the panel. The students may be assessed individually and in groups.

SEMINAR:

Each student is required to present a seminar on a topic of current relevance in Computer Science and Engineering. They are expected to refer research and review papers from standard journals like ACM, IEEE, ELSEVIER, IEE, COMPUTER JOURNAL, etc. Each student shall give a power point presentation of 30 minutes duration on his/her seminar topic in an audience of students and staff members from the department. Students from lower semesters may also attend the seminar presentation. The seminar presentation shall be assessed by a panel consisting of the Head of the Department, seminar coordinator, and 2/3 faculty members. The Head of the Department shall be the chairman of the panel.

Each student should also prepare a well-documented report on the seminar topic as per an approved format and submit to the department at the time of his/her seminar presentation. Students may follow the guidelines given in APPENDIX (R) to prepare the seminar report. While preparing the report, at least three cross-references must be used. The seminar report must not be the reproduction of the original report. The seminar report will also be evaluated for the award of sessional marks.

**Internal Continuous Assessment** *(Maximum Marks-100)*

**Marks should be awarded as follows:**

- **40 Marks** - Project preliminary works
- **40 Marks** - Seminar presentation, clarity in presentation, awareness to the topic, response to the audience etc.
- **20 Marks** - Evaluation of the seminar report
08.801 SOFTWARE ENGINEERING AND PROJECT MANAGEMENT  2 – 1 – 0

Module I (13 hours)

Module II (13 hours)
Planning phase – project planning objective, software scope, empirical estimation models- COCOMO, single variable model, staffing and personal planning. Design phase – design process, principles, concepts, effective modular design, topdown, bottom up strategies, stepwise refinement. Coding – programming practice, verification, size measures, complexity analysis, coding standards. Testing – fundamentals, white box testing, control structure testing, black box testing, basis path testing, code walkthroughs and inspection, testing strategies-Issues, Unit testing, integration testing, Validation testing, System testing. Maintenance-Overview of maintenance process, types of maintenance.
Risk management: software risks-risk identification-risk monitoring and management

Module III (13 hours)
Project scheduling and tracking: Basic concepts-relation between people and effort-defining task set for the software project-selecting software engineering task
Software configuration management: Basics and standards

Text books:

Reference Books
1. Software Engineering – Ian sommervile, University of Lancaster, Pearson Education

Internal Continuous Assessment (Maximum Marks:50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A: Short answer questions 10 x 4 marks=40 marks
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

PART B: Descriptive/Analytical/Problem solving questions 3 x 20 marks=60 marks
Candidates have to answer one question out of two or two questions out of four from each module

Maximum Total Marks: 100
# 08.802 COMPUTER SYSTEM ARCHITECTURE 3 – 1 – 0

## Module I (16 hours)
Parallel computer models - The state of computing, multi processors and multi computers, multi vector and SIMD computers, Parallel Random Access Machines and VLSI complexity model, Architectural development tracks. Program and network properties - conditions of parallelism, system interconnect architectures. Principles of scalable performance- scalability analysis and approaches.

## Module II(18 hours)
Processors and memory hierarchy – advanced processor technology, superscalar and vector processors, memory hierarchy technology, virtual memory technology. Bus and shared memory - backplane bus systems, shared memory organizations. Pipelining and superscalar techniques – linear vs. nonlinear pipelining, instruction pipeline design, arithmetic pipeline design, superscalar and super pipeline design

## Module III(18 hours)
Multiprocessors and multicomputers - multiprocessor system interconnects, cache coherence and synchronisation mechanism, three generations of multicomputers, Intel Paragon system architecture. Multivector and SIMD computers - vector processing principles, multivector multiprocessors, SIMD computer organizations. Scalable, multithreaded and data flow architectures - latency hiding techniques, principles of multithreading, scalable and multithreaded architectures, data flow and hybrid architectures.

### Text Books:

### Reference Books:
2. Computer Organization and Design: The Hardware/Software Interface, 3rd Edn – Patterson D. A. and Hennessy J. L., Morgan Kaufmann
5. Introduction to Parallel Processing – M. Sasikumar, D. Shikkare, P. Raviprakash, PHI.

### Internal Continuous Assessment (Maximum Marks: 50)
- 25 Marks - Tests (minimum 2)
- 15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software exercises, etc.
- 10 Marks - Regularity in the class

### University Examination Pattern

**PART A:** Short answer questions

Each question is compulsory. There should be at least three questions from each module and not more than four questions from any module.

**PART B:** Descriptive/Analytical/Problem solving questions

Candidates have to answer one question out of two or two questions out of four from each module

**Maximum Total Marks: 100**
08.803 CRYPTOGRAPHY AND NETWORKS SECURITY 2 – 1 – 0

Module I (14 hours)
AES: Basic Structure- Primitive operation- Inverse Cipher- Key Expansion, Rounds, Inverse Rounds.

Module II (13 hours)

Module III (12 hours)

Text Books:

Reference Books:
1. Network Security – Charlie Kaufman, Radia Perlman, Mike Speciner.

Internal Continuous Assessment (Maximum Marks: 50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software/hardware exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A: Short answer questions
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

PART B: Descriptive/Analytical/Problem solving questions
Candidates have to answer one question out of two or two questions out of four from each module

Maximum Total Marks: 100
08.804 DISTRIBUTED SYSTEMS 2 – 1 – 0

Module I (12 hours)

Module II (14 hours)
Interprocess communication: the API for internet protocol – external data representation and marshalling – client server communication - group communication- case study: inter process communication in Unix. Distributed objects and remote invocation: communication between distributed objects – remote procedure call – Events and notification. Operating system support: Operating system layer – protection – processes and threads- communication and invocation – Operating system architecture security: Overview of security techniques

Module III (13 hours)
Distributed file system: File service architecture - network file system- Andrew file system-recent advances Transactions and concurrency control: nested transactions-locks-optimistic concurrency control-comparison of methods for concurrency control-flat and nested distributed transactions- distributed deadlocks-transactions recovery. Replication System model and group communication- fault tolerant services-transactions with replicated data

Text Books:

Reference Books:
2. Distributed Systems and Computer Networks – M. Solomon and J. Krammer, PHI

Internal Continuous Assessment (Maximum Marks-50)

25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software exercises, etc.
10 Marks - Regularity in the class

3 x 20 marks=60 marks
Candidates have to answer one question out of two or two questions out of four from each module

Maximum Total Marks: 100
08.805 (1) FUZZY SET THEORY AND APPLICATIONS (ELECTIVE III) 3 – 1 – 0

Module I (18 hours)

Module II (16 hours)
Defuzzification to Crisp sets, Lambda-Cuts ($\lambda$-cuts) for Fuzzy sets and relations, Defuzzification methods. Classical Logic and Fuzzy Logic. Fuzzy systems, Natural language, Linguistic hedges. Fuzzy rule-based systems, Graphical techniques of inference.

Module III (18 hours)
Applications, Fuzzy Controllers (overview & example), Fuzzy Systems and Neural Networks, Fuzzy Neural Networks, Fuzzy Clustering, Fuzzy Pattern Recognition, Fuzzy Image Processing, Fuzzy Databases and Information retrieval systems.

Text Books:
1. Fuzzy Logic with Engineering Applications – Timothy J. Ross, Wiley Int. Edition (Modules I and II)
2. Fuzzy Sets and Fuzzy Logic: Theory and Applications – George J. Klir and Bo Yuan, PHI (Module III)

Reference Books:
1. Fuzzy Sets, Uncertainty, and Information – George J. Klir and Tina A. Folger, PHI
3. Fuzzy Logic: Intelligence, Control, and Information – John Yen and Reza Langari, Pearson Education

Internal Continuous Assessment (Maximum Marks:50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A: Short answer questions
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

PART B: Descriptive/Analytical/Problem solving questions
Candidates have to answer one question out of two or two questions out of four from each module

Maximum Total Marks: 100
Module I (16 hours)
What is graph – Application of graphs – finite and infinite graphs – Incidence and Degree – Isolated vertex, pendent vertex, Null graph.
Paths and circuits – Isomorphism, sub graphs, walks, paths and circuits, Connected graphs, disconnect graphs, Euler graphs Hamiltonian paths and circuits – Travelling salesman problem.
Trees – properties, pendent vertex, Distance and centres - Rooted and binary tree, counting trees, spanning trees.

Module II (18 hours)
Combinatorial versus geometric graphs, Planar graphs, Different representation of planar graphs, geometric dual, combinatorial dual, vector spaces of graph, ban2 vectors of a graph, orthogonal vectors and spaces Directed graphs – types of digraphs, Digraphs and binary relation, Euler graphs, trees with directed edges.

Module III (18 hours)
Graphs theoretic algorithms and computer programming - Algorithm for computer representation of a graph, algorithm for connectedness and components, spanning tree, directed circuits, shortest path, searching the graphs, Isomorphism.
Graphs in switching and cording theory – contact networks, Analysis of contact Networks, synthesis of contact networks, sequential switching networks, unit cube and its graph, graphs in coding theory.

Text Books:
1. Graph theory – Hararay, Narosa Publishers
2. Graph theory – Narasingh Deo, PHI.

PART A: Short answer questions
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module. 10 x 4 marks = 40 marks

PART B: Descriptive/Analytical/Problem solving questions
Candidates have to answer one question out of two or two questions out of four from each module 3 x 20 marks = 60 marks

Maximum Total Marks: 100
08.806 (2) DIGITAL IMAGE PROCESSING (ELECTIVE IV) 3 – 1 – 0

Module I (18 hours)

Module II (18 hours)

Module III (16 hours)

Text Books:

Reference Books:

Internal Continuous Assessment (Maximum Marks-50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A: Short answer questions
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

PART B: Descriptive/Analytical/Problem solving questions
Candidates have to answer one question out of two or two questions out of four from each module

Maximum Total Marks: 100
08.806 (3)  EMBEDDED SYSTEMS  (ELECTIVE IV)  3 – 1 – 0

Module 1 (17 hours)
Fundamentals of Embedded Systems - complex systems and microprocessors - Embedded system design process – requirements - specifications - architecture design - design of hardware and software components - structural and behavioural description.
CPUs - i/o devices - i/o primitives - busy wait i/o - interrupts - supervisor mode - exception - traps - co-processors - caches - memory management - CPU performance.
Process and OS - multiple tasks - context switching - scheduling policies - interprocess communication mechanisms.

Module II (17 hours)
Embedded computing platform - CPU bus, memory devices - i/o devices - component interfacing - designing with microprocessor.
Program Design & Analysis - Data flow graphs - basic compilation techniques - analysis & optimization of execution time - program size - Validation and testing - Design example - Software Modem.
Networks - Distributed Embedded Architectures, Networks for embedded systems, Network based design, Internet enabled systems

Module III (18 hours)

Text Books:
2. The 8051 Microcontroller and Embedded Systems – Muhammed Ali Mazidi, Janice Gillispie Mazidi, Pearson Education

Reference Books:
1. Fundamentals of Embedded system software – Daniel W Lewis, Pearson Education
2. Embedded System Design – Steve Heath, Butter worth-Heinemann
4. Real Time Systems – Rajib Mall, Pearson Education
5. Embedded Systems: Design and Applications with the 68HC and HCS 12 – S.F. Barret and D.J. Pack, Pearson

Internal Continuous Assessment (Maximum Marks:50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A:  Short answer questions
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

PART B:  Descriptive/Analytical/Problem solving questions
Candidates have to answer one question out of two or two questions out of four from each module.

Maximum Total Marks: 100
08.806 (4)  INTERNET TECHNOLOGY  (ELECTIVE  IV)  3 – 1 – 0

Module I (17 hours)

Module II (17 hours)

Module III (18 hours)
NAT, VPN, DHCP, DNS – Namespace, Internet Domain Names, Mapping Domain Names to Address, Domain Name Resolution. Remote Login & Desktop - Telnet, SSH File Transfer and Access - FTP, TFTP, NFS. Electronic Mail - SMTP, POP, IMAP, MIME, Worldwide Web, HTTP. Video over IP.

Text Books:
1. Developing Web Applications – Ralph Moseley, Wiley India
2. E-commerce Strategy, Technology & Implementation – Garhy P. Schneider, Cengage Learning India Edition

Reference Books:
2. TCP/IP Protocol Suite – B.A. Forouzan, TMH

Internal Continuous Assessment (Maximum Marks: 50)

25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as homework, problem solving, literature survey, seminar, term-project, software exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A: Short answer questions
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.

PART B: Descriptive/Analytical/Problem solving questions
Candidates have to answer one question out of two or two questions out of four from each module

Maximum Total Marks: 100
Module I (17 hours)

Introduction to Life Sciences: Levels of organization in nature: atom, molecule, organelle, cell, tissue, organ, organ system; Unicellular and multicellular organisms; Branches of Biology - Cell Biology - Cell as the structural and functional unit of life - Structural components of cell - Types of cells - Prokaryotic, Eukaryotic, Animal and Plant cell; Important Biomolecules- Nuclei acids, proteins, enzymes.

Central Dogma: DNA, RNA and Protein; Chromosome, Genome, Genes, Gene Loci, Gene Sequencing – Short gun and Contig approach; Restriction Enzyme, restriction sites, DNA copying/amplification, PCR and Electrophoresis.

Module II (18 hours)

Genomics & Proteomics: String view of DNA, Reading Frames (+1, +2, +3, -1, -2, -3), Open reading frame, codon, genetic code, transcription & translation- mRNA, sense and anti-sense strands, rRNA, tRNA, upstream and downstream, genomic DNA, complimentary DNA, introns and exons, alternative spicing, junk DNA, Sequence databases- GenBank, EMBL and DDBJ- concepts of similarity- homologous- orthologous and paralogous sequences, FASTA file format.

Proteome and proteomics – proteins as workhorse molecules of life; protein separation using 2D gel electrophoresis; Study on amino acids and four levels of protein structure – Protein databases – PDB, Uniprot

Module III (17 hours)

Text Books:
1. Essential Biology (Abridged) Campbell, Cambridge

Reference Books:

Internal Continuous Assessment (Maximum Marks-50)
25 Marks - Tests (minimum 2)
15 Marks - Assignments (minimum 3) such as home work, problem solving, literature survey, seminar, term-project, software exercises, etc.
10 Marks - Regularity in the class

University Examination Pattern

PART A: Short answer questions
All questions are compulsory. There should be at least three questions from each module and not more than four questions from any module.
10 x 4 marks=40 marks

PART B: Descriptive/Analytical/Problem solving questions
Candidates have to answer one question out of two or two questions out of four from each module.
3 x 20 marks=60 marks

Maximum Total Marks: 100
08.807  ALGORITHM DESIGN LAB  0 – 0 – 4

1. Line drawing algorithm,
2. Circle drawing algorithm,
4. Line clipping and polygon clipping algorithms.
5. Polygon filling and hatching algorithms.
6. Alphanumeric character generation.
7. Animation,
8. Transformation and projections of 3D objects, back face removal algorithm.
9. Representation of graphs using adjacency lists, implementation of graph searching algorithms – DFS and BFS.
11. Implementation of Kruskal’s algorithm to compute minimum cost spanning tree.
12. Implementation of Dijkstra’s shortest path algorithm and graphic simulation.
13. Height balanced trees (Red-black tree) - insertion and deletion operations.
15. Matrix chain ordering and multiplication using dynamic programming.

**General instructions:**
- Evaluation is a serious process that is to be conducted under the equal responsibility of both the internal and external examiners.
- The number of candidates evaluated per day should not exceed 20
03.808 PROJECT WORK AND VIVA VOICE  0 – 0 – 4

PROJECT WORK:
The project is the continuation of the seventh semester project. Students are expected to utilize the project time for the development and implementation of the project whose design and other works have been completed in the seventh semester. A detailed project report in soft bound in an approved format is to be submitted at the end of the semester. Students may follow the guidelines given in APPENDIX (R) to prepare the project report.

The performance of the students in the project work shall be assessed on a continuous basis. There shall be at least an interim evaluation and a final evaluation of the project work. Each student in the group may give a power point presentation on the project work during the evaluation process. For the award of the sessional marks, the project report and the power point presentation of the project work shall be assessed by a panel consisting of the Head of the Department, project coordinator, project guide, and a senior faculty member. The Head of the Department shall be the chairman of the panel. The students may be assessed individually and in groups.

VIVA VOICE:
At the time of viva-voce examination, the project work has to be evaluated in addition to assessing the students’ knowledge in the field of Computer Science and Engineering and other related and advanced topics. He/she is expected to present his/her academic records including project report, seminar report, etc. at the time of viva-voce examination. Evaluation is a serious process that is to be conducted under the equal responsibility of both the internal and external examiners.

APPENDIX (R)

GUIDELINES FOR PREPARATION OF MINI / MAJOR PROJECTS AND SEMINAR REPORTS FOR B.TECH

Facing page: The title of the project, list of students with roll numbers, name of guide, department, month and year of submission along with the Institute address and emblem will be included on the first cover. This may be made in special quality paper like plastic coated paper.

Inner cover: Contents can be same as that of the front cover, but on ordinary A4 size paper.

The report may contain three main parts. These include the preliminary part, body of the report, and reference and appendices (if any) as the concluding or final part. The order of these items is as given below.

PRELIMINARY PART
Certificate from staff member in-Charge
Acknowledgements, if any
Abstract
Contents
List of abbreviations, if any
List of figures, if any
List of tables, if any

BODY OF THE PROJECT REPORT

Chapter I    INTRODUCTION
            Motivation and Overview
            Literature Survey, if any

Chapter II    MATERIALS AND METHODOLOGY
            Algorithms, if any
            Program development, if any
            ............................
            ............................

Chapter N-1 RESULTS AND DISCUSSIONS

Chapter N: CONCLUSIONS AND SUGGESTIONS FOR FURTHER WORK

CONCLUDING PART

References
Appendix or Appendices
Abstract
It should be a concise description of the problem(s) addressed and your method of solving it/them, your results and conclusions. An abstract must be self-contained. The number of words may be limited not exceeding three-quarter of a page of spacing 1.5 and font type Times New Roman with size 12.

Contents
The contents should list the chapter headings, sections and subsections of the different chapters along with page numbers of each. It should be possible to get a complete picture of the project report by looking at the contents.

List of abbreviations
List the full form of the abbreviations used

List of figures
List the number and captions of the figures with page numbers

List of tables
List the number and titles of the tables with page numbers

Page numbering
The preliminary parts are numbered in roman numerals (i, ii, etc). The first page of the first chapter (Introduction) onwards will be numbered in Arabic numerals 1 2 3 etc.

Numbering sections, subsections, equations, figures etc
It is common practice to use decimal numbering in the report. If the chapter number is 2, the section numbers will be 2.1, 2.2, 2.3 etc. The subsections in section 2.2 will be numbered as 2.2.1, 2.2.2 etc. Unless essential, it is not necessary to use numbers to lower levels than three stages. Headings of paragraphs below the subsections may be bold faced and in sentence case. Similarly, it is useful and convenient to number the figures also chapter-wise. The figures in chapter 4 will be numbered Fig.4.1, Fig 4.2 etc. This helps you in assembling the figures and putting it in proper order. Similarly, the tables also numbered as Table 4.1 Table 4.2 etc. Usually the figure captions are written below the figure and table captions on top of the table. All figures should have proper description by legends, title of the axes and any other information to make the figures self-explanatory. Figures in colour are not essential, but if it is essential, can be given. The same numbering scheme can be used for equations also. Only thing to be remembered is that references to the figures are made like Fig 4.2 and equations as Eqn (5.8) and tables as Table 3.8. If there are some appendices, these can be numbered as A1, A2, A3 etc. The equations in these appendices can be numbered as (A1.1), (A2.3) etc. All figures and tables must be in place in the text near, but not before, where they are first mentioned. References can be numbered as 1, 2, 3 etc in the order in which they are referred to in the body of the report. A typical reference in the body of the report will appear as “as stated in [3] or in [3 ] – [5]” etc.
References to journal papers should contain the name of the author(s), title of the paper, name of the journal, volume number, issue number, particular pages (pp) and year of publication.

Example:

Similarly conference papers should mention the name of author(s), title of the paper, name of the conference, place in which the conference was held and date, month and year of the conference along with the page numbers of the paper in the proceedings of the conference.

Example:

References to books should contain name of the author, title of the book, name of the publisher, edition number, and year of publication. If possible ISBN Number also can be quoted.

Example

Reference to web sites can be given as follows:

Example

Appendices
If there is material that if included in the body of the report would break up the flow of reading or bore the reader unbearably, it is better to include it as an appendix. Some items which are typically included in appendices are: major derivations or theoretical developments, important and original computer programs, data files that are too large to be represented simply in the results chapters, pictures or diagrams of results which are not important enough to keep in the main text etc.

General Notes:
- Single column format and print only on one side.
- Use 1.5 spacing for the continuous text.
- Minimum margin:- Binding side –30 mm and 24mm on all other sides
- Full justification of all texts
- Ensure that each new paragraph is clearly indicated.
- Ensure that each new section head is separated by a double space.
- Use 12 pt font Times New Roman for the continuous text (except headings) in MS Word
- Chapter/section headings shall be as per the fonts shown in the sample report structure
- All chapters to be started on a fresh page
- Follow internationally accepted symbols, rules and conventions
- Use the Int. system of units (SI). If other quantities are mentioned, give their eqvnt. in SI units
### Suggested Font sizes and margins

B.Tech Project Report

AN EDGE DETECTION SCHEME FOR COLOUR IMAGES

Submitted in partial fulfillment for the award of the Degree of Bachelor of Technology in Computer Science and Engineering

Submitted by

ABCD (Roll No. 8005)
EFGH (Roll No. 8034)
ABED (Roll No. 8057)

Under the guidance of

Mr/Ms/Dr XYMNL

Department of Computer Science and Engineering
T.K.M. COLLEGE OF ENGINEERING, KOLLAM
KERALA
MARCH 2009
CERTIFICATE

This is to certify that the thesis entitled “AN EDGE DETECTION SCHEME FOR COLOUR IMAGES” is a bonafide record of the major project done by **ABCD** (Roll No. 8005), **EFGH** (Roll No. 8034) and **ABED** (Roll No. 8057) under my supervision and guidance, in partial fulfillment for the award of Degree of Bachelor of Technology in Computer Science and Engineering from the University of Kerala for the year 2009.

ACKNOWLEDGEMENT

First and foremost, we wish to place on records our ardent and earnest gratitude to our project guide Mr/Ms/Dr XYMN, Assistant Professor, Dept. of computer Science and Engineering. His tutelage and guidance was the leading factor in translating our efforts to fruition. His prudent and perspective vision has shown light on our trail to triumph.

We are extremely happy to mention a great word of gratitude to Prof. Khalid M, Head of the Department of Computer Science and Engineering for providing us with all facilities for the completion of this work.

Finally yet importantly, we would like to express our gratitude to our project coordinator Mr/Ms/Dr YZXV for his/her valuable assistance provided during the course of the project.

We would also extend our gratefulness to all the staff members in the Department. We also thank all our friends and well-wishers who greatly helped us in our endeavour.

ABCD, EFGH, ABED

ABSTRACT

Edge detection process for colour images is an important research issue. Typically, a colour image

In this project, an attempt has been made using the moment preserving thresholding technique.

This scheme locates the edge boundaries such as data hiding and image watermarking.

CHAPTER 1
INTRODUCTION

Edge detection is a fundamental task in image processing and computer vision. It has been broadly covered and documented since the early stage of image processing studies. Its importance arises from the fact that edges are considered as important features for analyzing the most important information contained in images, leading to classification of objects in an image.

1.1 Introduction

There are many different methods for edge detection [1], such as Sobel filtering, Prewitt filtering, but some common problems of these methods are.
